

The Olympus E-3 delivers ultimate image quality, the world's fastest autofocus*, and superior durability. In addition, the E-3 has Superior In-body Image Stabilization, so no matter which of the 100% digital E-System lenses you use, from telephoto to ultra-wide, your images will always be sharp. Its body also combines an 11-point AF system with a new High Speed Mirror/Shutter unit, so you'll have the fastest and most responsive camera in the world. Plus, with TruePic III and a 10-megapixel MOS image sensor, you'll get less noise, more accurate color, and finer details in even the lowest light. Together with a splashproof and dustproof magnesium alloy body, as well as Advanced Live View on a 270° swivel LCD, the Olympus E-3 is the performance camera you've been waiting for.

DIGITAL LENSES

"WITH A LESSER CAMERA, MOMENTS LIKE THIS CAN PASS YOU BY."

- ANNE DAY, OLYMPUS VISIONARY

As a photojournalist, Anne Day has covered Haiti, Cuba, South Africa and Namibia, as well as American Presidential Inaugurations. "The OLYMPUS E-System is perfect for almost every job," says Anne. "I not only have it with me at all times but trust it will capture the images I need - regardless of the situation." Recently, Anne has been photographing nature and landscapes, and she credits her Olympus E-3 with helping her get outstanding shots like this one. "With the speed of the autofocus and the impeccable image stabilization, I can always count on getting the shot I need. Usually the 12-60mm is enough to capture most things, but I am glad to have the 50-200mm. The lenses are sharp, and the files I get are beautiful. When you need to capture such a small moment in time, and you need it to be perfect, there's nothing better." Anne lives with her family in New York and Connecticut and continues to travel wherever her photography takes her.

Expression Media 2

Travel the world. Not your computer.

Traveling for shoots is exciting. It's a lot less fun traversing your computer and external storage looking for the perfect shot. Fortunately, there's Microsoft Expression Media 2, which catalogs all your images for you—whether they're on your hard drive, external drive, CD, or DVD. A streamlined catalog makes finding what you need simple and support for almost any file format gives you added flexibility. Share your catalogs with clients. Put together Web galleries and slideshows with zero fuss. And there's nothing like geotagging to let people know you've finally stepped away from the computer.

Finally, image management that's a snap. For more information visit: www.microsoft.com/prophoto

"Expression Media is an essential tool in our studio for keeping track of hundreds of thousands of images, stored across a dozen terabytes of media. And because Expression creates relatively small catalog documents , I can take a record of my entire archive with me wherever I go."

ALL NEW

AT-X 116 PRO DX

AF 11-16mm f/2.8 FC WR

The new Tokina AT-X 116 PRO DX is an ultra-wide angle lens with a lightning fast f/2.8 aperture for better photography in low-light situations. Many photojournalists consider having an f/2.8 apertured lens a must. Based on the award-winning optical design of the AT-X 124 PRO DX (12-24mm f/4) lens, the new AT-X 116 PRO DX has a short zoom range to maintain optical quality at wider apertures. With Tokina the difference is clear.

Uncap your lens and join Nikon professional photographers Bill Durrence and David Tejada on a sizzling trek to California's Death Valley National Park! You will encounter one photo op after another as you travel amid the Park's diverse geography, unique desert wildlife, historic sites and clear night skies.

Begin your journey by watching the sunrise over Zabriskie Point, an area located in the Amargosa Mountain Range and known for its remarkable erosional landscape (many will also recognize this locale from the cover of U2's album *The Joshua Tree*). Next stop will be Devil's Golf Course, which you will soon find out is not actually a golf course but instead a large salt pan with a jagged terrain comprised of salt crystals (the name stuck after a 1934 National Parks guide book stated that "only the devil could play golf" on its surface). Your camera will meet even more otherworldly landscapes when you visit the Badwater salt flats, home to hexagonal saucer-shaped landforms created after the salty pan dries and the salt crystals expand. The Badwater area is also notable for containing the lowest point of elevation in North America at 282 feet below sea level. Next, arrange colorful compositions at Artist's Drive and Palette, a collective

rock formation renowned for its many-hued facades caused by the oxidation of various metals. End your day with stunning sunset panoramas at Dante's View, a truly memorable vantage point showing the sceneries of Badwater Basin and Telescope Peak, among others.

The following day, capture the sun as it rises over Stovepipe Wells sand dunes, a 14-square mile expanse of rippling land, often said to be the most photographed sand dunes in the world. Journeying on to Ubehebe Crater, prepare to encounter a truly magnificent sight when your lens meets this half-mile-wide volcanic crater. The majestic vistas continue at the Mesquite Flat Dunes, a landscape so picturesque that it has been used as the backdrop for many Hollywood films, including the *Star Wars* series.

A stop at Titus Canyon is sure to fill your frame with even more stunning images. A deep, narrow gorge cut into the Grapevine Mountains, Titus Canyon is home to rugged terrain, colorful rock formations, petroglyphs, a ghost town, rare plants and astounding canyon narrows. Offering out-of-this-world views in a truly unique atmosphere, Death Valley National Park is a must-see locale for every photographer!

Special Thanks to our Premier Sponsor:

Come to Death Valley and try out some of the latest equipment that **Nikon** offers including their high-performance digital SLRs, NIKKOR lenses and a variety of Coolpix compact digital cameras. You'll capture Death Valley as never before!

I love shooting rodeos, and people often ask how to get good photos at what seem to be impossibly fast-paced events. I tell them to follow these rules:

■Think small and daytime.

Hometown rodeos let you get up close and personal. Often, you can stand right outside the arena fence, where you'll get everything except run over. And daylight allows the combination of very fast shutter speeds

and small apertures.

■Get full-time focus. Set your camera to "servo" or "continuous focus" mode. This way, the camera will constantly adjust autofocus on the moving subject until the shutter fires.

- ■Get long. I use a 300mm f/4 lens on my Nikon D200 because it's light enough to handhold, yet it covers most of the action in most arenas, which typically are about half to two-thirds the width of a football field.
- ■Use a high ISO. When shooting handheld with a long lens, you need a fast shutter speed to beat the blur of camera shake and to stop the action. For that, a high ISO is key. At ISO 400 in full sun, you can shoot at f/8 and 1/1000 sec. But even better is ISO

1600 because it yields f/11 at 1/2000. That small aperture increases the depth of field, so you'll still get a sharp shot in case your autofocus was locked onto the horse's nose instead of the rider's. And any increase in noise with a high ISO can actually enhance the look of gritty subjects like rodeos. Gregory Monroe Littleton, CO

Go for the gold

I've found a great way to add wonderfully rich, golden tones to photos before taking the picture (instead of afterwards in software). I paint cards with watercolor paints and use them to set a custom white balance on my DSLR. The cards are cerulean blue, cobalt blue, or ultramarine blue, depending on the tone I want in the print.

Frank Weng Flushing, NY

Quick study

I'd like to learn Adobe Photoshop. I bought *Photoshop for Dummies*, and it was useless. I read about half the book and it still hadn't shown me how to do anything useful. Enough

explaining things like how to open files! Can you recommend a book that assumes I'm smart and will quickly get me up to speed?

> Ronny Richardson Woodstock, GA

That's easy: Adobe Photoshop Restoration & Retouching (3rd Edition), by Katrin Eismann and Wayne Palmer (New Riders, 2006; \$35), takes a refreshing, grown-up approach.

Life savor

I found "How Photography Saved My Life" (June 2008) quite inspiring. A few years ago, diabetes caught up with me, and I joined the ranks of the disabled. Somewhere between boredom and depression, my interest in photography reawakened. I now shoot with a Canon EOS Digital Rebel XTi, and while my mobility is limited, my camera has reopened a door to the world. John M. Williams Hanahan, SC **

WHIRLEDTOUR

Lessons from an all-around photographer

Everen T. Brown wants to photograph it all.

First, he means everywhere. Over

the past 22 years, this 48-year-old Salt Lake City resident has traveled more than 1.3 million miles to 135 countries and both poles.

Second, he means everything. As in all 360 degrees of a scene. And for that he's enlisted an offbeat old film camera that shoots 360-degree panoramas. It's called the Globuscope. "When I first saw the camera, I fell in love with its images," he says. "It's real 'you-are-there' photography."

Basically, the Globuscope is a 35mm camera set on a rotating pedestal and covered with a dome with a slit. Press a button, and the spring-loaded contraption spins around, exposing 6.25 inches of film with every revolution. It captures what you would see if you spun around with your eyes wide open.

"I wanted to slow down and see the world," says Brown. "With the Globuscope, I have to slow down, because it isn't a question of which part of a destination I'm going to shoot. I'm going to get everything."

Unlike the rest of us, Brown can't select just a slice of a scene. If there's a parking lot directly behind that great vista of the Grand Canyon, the 360-degree eye of the Globuscope captures it.

It leads to challenges that most of us never have to consider.

While most photographers can shoot from the edges of a scene, the Globuscope requires, as Brown puts it, "total immersion." He goes into the Grand Canyon. Into Peru's Machu Picchu. Into the heart of Great Britain's Stonehenge.

"I'm always looking for that center spot," he says. "I have to get into the middle of the action."

Finding the shot is often more difficult than taking it. The camera is totally manual, with two speeds—a 1-sec rotation for an effective shutter speed of 1/250 sec, and a 6-sec rotation, which is effectively 1/40 sec. Apertures range from f/3.5–16. Brown typically shoots Kodak Gold 100 print film, with a 36-exposure roll delivering up to eight 360-degree images.

Viewfinder? There isn't one.

"I compose in my head," says Brown. He simply holds the camera over his head and fires. (If it were held at eye level, the Globuscope would capture the photographer's face.)

Tripod? Forget it. "I just suck in my gut and hold really still," he says. His technique has worked while shooting aboard an elephant in India, an inflatable boat in Antarctica, and a zero-gravity flight above the earth.

Made in New York by the Globus Brothers for about 20 years starting in the early 1980s, Globuscopes are now collectibles, with one recently offered on eBay for \$3,100.

But for Brown, this kooky camera isn't a novelty; it's become his profession. He makes his living licensing images to websites and digital publishers who use software to give the photos a virtual-reality feeling.

In fact, Brown himself is taking that high-tech route, and has digitized images from around the world to create what he calls "The 360 World Atlas." A DVD selling for \$70, direct (www.360atlas.com), it will include more than 1,200 "virtual tours," as well as facts about the places featured and travel information. Covering

everything from South Georgia Island to North Korea, Brown expects his DVD to be a high-tech education/ travel/photography blockbuster.

But if he's such a tech wizard, why shoot with an old, wind-up, film camera? Why not get a state-of-the-art DSLR and then use stitching software to produce a 360-degree view?

"To me, there's magic in capturing one instant in time in one frame," he says. "When you're stitching, time passes between frames. People move, clouds move." In addition, he can scan the film and run the files through an off-theshelf inkjet printer to produce 10inch-by-6-foot prints.

Pretty amazing.

"Someday," says Brown, "digital cameras will catch up."

The winners of each category will receive a new Panasonic Lumix Digital Camera, a SmugMug Liftetime Pro Account, as well as a 2 year world membership from fotocommunity.com.

Panasonic ideas for life

High Re-definition

\$350, street www.samsung.com

Now you can fit high-def in your pocket, because Samsung's NV24HD is the very first compact camera to allow high-definition video capture, recording with 720p resolution. But even if you never switch to video mode, you'll still have a 10.2MP camera with a 24mm ultrawide-angle lens that you have no excuse to leave at home. **HOT:** User-friendly scroll buttons, autoexposure bracketing, ISO up to 3200, dual image stabilization, seven special-effect modes. **NOT:** You'll need an HDTV and Samsung's HDMI CEC cradle to best view your videos.

Wide-format Winner

\$800, street www.epson.com

You shouldn't mess with a good thing, and after four years with the Stylus Photo 2400 in its line, it seemed Epson didn't plan to. Until now. The new 13-inchwide Stylus Photo R2880 takes advantage of the same great print engine of the higher-end 880-suffixed models and the same pigment-based UltraChrome K3 ink set. It's the second printer to include Epson's Radiance technology, which the company says creates smoother color transitions and reduces grain. For a full test, see www.PopPhoto.com. HOT: Long-life prints up to 13x19 inches (13x44 inches using the roll-feed option), eight-ink system for a wide color gamut. NOT: You have to switch manually between matte and photo black, there are no card slots for quick, computer-free printing, and it's fairly pricey.

In Control \$299, street ■ www.adobe.com

Adobe Lightroom 1.0 freed photographers to work in RAW without laboring in

Photoshop, but its major drawback was that it limited you to global fixes. Not anymore. The biggest improvement in Lightroom 2.0 (\$99 as an upgrade from 1.0) is the local adjustment brush for working on one area of your photo at a time. **HOT:** Keywording and collecting are easier, a new gradient tool mimics a graduated filter, and sharpening is more useful—now you can sharpen on export, not just when you print. **NOT:** Adobe will no longer add new cameras to Lightroom 1.0, so if you get a new camera, you'll have to buy this upgrade right away.

Bring a camera on an adventure

with Argus Camera's
Bean, a 5-megapixel
digital camera that's also
a carabiner. It's rugged
and can be clipped onto
just about anything. (\$70,

S # 19 PIEGO CERVO/ISTOCKPHOTO (LCD IMAGE)

You get the shot, and we'll keep it safe and sound.

It's your passion, your hobby, your job, your shot. And at Lexar we're all about making sure you keep it. From reliability, to speed, to recovery, we're focused on creating a line of superior memory cards for photographers just like you. **Lexar. Focused on photographers.**

THE GOODS HIGH 5

1. Giottos Ball Head MH-1304

\$20, street www.hpmarketingcorp.com

Upgrade your old tripod or monopod and get the smooth, precise adjustment of a ballhead without the usual bulk. This petite model measures slightly more than 2 inches tall by 1 inch in diameter. Thanks to the hollowed ball, it weighs only 2.6 ounces—yet supports up to 7 pounds. It comes with a corkcovered platform and is ready to go to work.

2. Lally Cap White Balance Aide

\$29, direct www.lallyphotography.com/store

Setting the custom white balance on your DSLR usually involves aiming the lens at a white (or 18-percent gray) card and tripping the shutter. It's worth it because in some situations the Auto setting gives you "almost" instead of "automatic." But carrying a white card can be a pain. Enter Lally Cap. Resembling a doll-sized, gray shower cap, it fits on your lens and makes a perfectly calibrated test target. Bonus: It doubles as a flexible lens cap.

MilaGrid TeleGrid Telephoto Flash Extender

\$30, street www.milagrid.homestead.com

When you put a long lens on your camera, don't you often wish you had a similarly long-range flash? This thin, flexible Fresnel lens may be just what you need to boost the range of your shoe-mounted flash. It attaches easily by hook-and-loop fasteners and concentrates the pop to give you more light where you need it. Think of it as the opposite of a flash diffuser. It's designed to work with telephoto lenses only (70 to 500mm).

4. Delkin Archival Gold BD-R Blu-ray DVD media

\$27, direct www.delkin.com

If you have a state-of-the-art computer with a Blu-ray DVD burner, you can save 25GB of data in only 23 minutes on one of these new Blu-ray DVDs. The new medium, which uses a proprietary ScratchArmor coating, can be written at a speedy 4X and holds as much as five conventional DVDs or 33 CDs. Not only are these high-tech disks billed as resisting the effects of heat, humidity, and UV light, but Delkin says they'll also last 200 years.

5. Pelican Camera Protector

\$25, direct (additional \$5 for DSLR version)

www.pelicanproducts.us

If you've ever wrapped a raincoat around your camera to shield it from the weather, you'll understand the Pelican Camera Protector.

Sewn from military-grade, waterproof nylon and padded with foam insulation, it lets you shoot in extreme conditions, and it also muffles noise. The DSLR version accommodates lenses up to 7 inches long. —Jon Sienkiewicz

we've got "FLEXITURE™"

At BetterPhoto, you get a unique and special combination of flexibility and structure. You get to take the class according to your schedule, but we don't leave you hanging, like you might be in a self-paced class. You get a lesson and assignment each week and this structure keeps you on track toward photographic success!

SHOOTING WHEN THE STARS ARE OUT

A recent graduate of the Rochester Institute of Technology, 23-year-old Jarrett Murphy can be found haunting America's roadsides in the middle of the night, looking for great pictures. Despite frequent run-ins with police officers whose blaring lights ruin his long exposures, he continues to find beauty in the everyday landscape. See more of his night photography at www.jarrettmurphy.com.

Q. What are we looking at here?

A. These are two trees that I noticed-before the leaves come in during the spring, a lot of the trees in Rochester have orange limbs. I don't

THE OUTTAKES

1. One branch on the left looks great, but the picture is too dark overall. Where's the magic? 2. This version is getting there but, without the trees fully illuminated, it's just a boring night shot.

know what kind they are. but I just noticed it this vear. These trees are just off the road, and the orange glow is from the highway's lights, which is just over the hill. If the camera were a bit higher. you would see road signs.

Q. How did you light the scene?

A. For all my photographs, I bring lights with me and go out and light the subjects. I don't need 30 or 40 lights to make it bright-I just move a couple of lights around during the course of the exposure. I have used flashlights and strobe units, but I can't remember what I used for this picture. What you see here is a mixture of ambient light and lights that I brought. This version was about a 10-minute exposure.

Q. What camera and lens did you use?

A. It's a Horseman 450 4x5 camera, with a 65mm Schneider-Kreuznach Super-Angulon lens. The film was Fujifilm 160 NPL, which unfortunately is no longer made.

Q. What makes this the best of the set?

A. For the first three I shot, I was trying to light behind the trees and skim the branches, but it didn't work terribly well. There is some light in the picture, but there isn't really a presence of light. In the final picture, the trees seem to glow on their own.

Q. Any tips for shooting at night?

A. You need your own lightmeter to figure out how bright the ambient light is. To start out, just use the cheapest light you can find, either a handheld flash or a flashlight. The subject wouldn't have to be nature—just find something you're interested in. It might be easier to start with something smaller. With a DSLR, you could move the lights wherever you needed to while you just let the shutter drag. Also, turn off the long-exposure noise reduction and work until vou see something you like. When you get it, turn the NR back on and reshoot.

Q. What time was it?

A. All my pictures are photographed between 11 at night and 1 a.m. I have to wait until it gets very late so there will be fewer cars passing by. When I'm lucky, my girlfriend comes with me and keeps me company and helps carry things or explain to the police that we're not doing something bad when they show up. And I'd say they do show up about 20 percent of the time. •

2nd Place Knock Out Sometimes you have to

go looking for the subjects, and sometimes the opportunity comes looking for you. Nineteen-year-old college student JONATHAN FANNING lucked out when a boxing promoter noticed some of his action photos and asked him if he'd like to shoot at a fight in his hometown of St. Petersburg, FL. After a couple of bouts, Fanning got a feel for how the boxers moved, and he walked away with this winning shot. **Tech info:** Nikon D1x with 50mm f/1.8 Nikkor AF lens. Exposure, 1/250 sec at f/1.8, ISO 320. Sharpening, lights cloned out, and film-grain filter applied in Adobe Photoshop CS2.

3rd Place Perfecting the Landscape

Technology manager TAD BOWMAN, 35, took about 70 frames of this scene near Silver Jack Reservoir, CO. "It was a windy day with the sun peeking in and out of the clouds," he says. Finally, after an hour and a half, he found the perfect combination of light and wind, proving that it's patience that makes perfect photos. Check out more of his work at www.tadbowman.com. Tech info: Tripod-mounted Canon EOS-1Ds Mark II with 70–200mm f/2.8 Canon IS lens. Exposure, 1/13 sec at f/14, ISO 100. RAW conversion and minor adjustments made in Adobe Photoshop CS2.

Use the right gear. Your equipment is a key to success for photographing birds in flight. The better your camera body and lens combination, the better your results. Start with a small, light lens, such as a 400mm f/5.6. Get a fastfocusing DSLR body and, as your commitment grows, pay for the best glass you can afford. Leave your tripod at home-shooting with the camera in your hand is essential for capturing consistently good images of birds in flight. A shoulder stock can help steady the lens. And image

Get in position. Follow these rules for proper stance and movement before pushing the shutter button:

• Spread your feet at least shoulderwidth apart to allow freedom of motion while following a subject

stabilization, whether built into the

camera or the lens, is also a big help.

through the viewfinder.

songbirds inhabit grasslands and agricultural, suburban, and urban areas. Richard Ettlinger photographed this mother feeding insects to her young at Oceanside Marine Nature Study Center using a Canon EOS 10D, 500mm f/4L EF-IS Canon lens and 1.4X EF extender. Exposure, in aperture-priority mode, was 1/750 sec at f/5.6, ISO 400.

- Do not hold the camera and lens too tightly; maintain a firm but relaxed grip.
- •While panning to follow your subject, avoid sudden, erratic movement. Keep it smooth and follow through the panning while shooting—don't stop when the shutter releases.
- •Follow the bird's flight pattern with your eye, not in the viewfinder. This allows for better transfer from spotting to tracking the subject.
- You often will need to aim slightly ahead of the subject, depending on its speed.
- •Always have the camera turned on and in a ready position near your chest. That fly-by can happen at any time.

Set your exposure.
For birds in flight, the best approach is manual exposure. Meter for the

intended subject and it will be exposed properly, regardless of the background. But if you're truly a beginner, start with program mode and bracket until you get the hang of it. In manual mode, use partial or evaluative metering to get a light reading for your subject. I often meter off grass, trees, and shrubs, as well as blue sky. Shutter speed is vital to stop motion—select 1/1250 sec or faster, with an ISO of 320–400.

Use autofocus wisely.

Most high-end DSLRs
have a mode in continuous
autofocus that predicts the
focus on a moving subject. With
this function, you press the shutter
part-way, and the camera continually
calculates where the subject will
be, adjusting the focus as long as
the subject stays in the autofocus
area of the viewfinder. This is by far
the best way to focus when you're
shooting birds in flight.

The world's best film simulator just got better.

Introducing Exposure 2,[®] an even more featurepacked version of our award-winning Photoshop[®] plug-in that gives digital photographs the look and feel of film. Whether you're a fashion or wedding photographer, a designer or art director, you'll have one-click access to the broadest range of film stocks and special effects settings available anywhere.

"Exposure captures every film I want with digital ease."

Max Ferguson - Photographer, Image Maker, and Photoshop Author

It all comes down to grain.

Exposure 2 gives you the most realistic grain on the market, now with even more control over sharpness, color variation, and intensity throughout the tonal range. And since our grain size automatically adjusts to your image size, you get consistent results across all your cameras.

Pick a film, any film.

When it comes to the variety of film stocks you can simulate, Exposure 2 has no peer. You can match the look of popular film stocks like Portra, Velvia, Kodachrome, Polaroid® and TRI-X. We've even saved some film stocks from extinction, like Agfa® Scala,® GAF® 500, and Kodak® EES.

More effective effects.

With over 300 presets, Exposure 2 has even more special effect settings than before, including push and cross processing, a vastly improved infrared simulator, and sophisticated color to black and white conversion.

So order Exposure 2 today.

There's no better way to give your photographs the best of both the digital and film worlds. **Visit www.alienskin.com for details.**

BALD EAGLES, ALASKA: Working as a team, these two predators share the burden of carrying a fish (hidden by their bodies in this scene). Photographed by Miguel Lasa using a Canon EOS-1D Mark II and an unspecified lens at 300mm. Exposure in shutter-priority mode, using evaluative metering, was 1/1250 sec at f/5.6, ISO 125, with –2/3-EV exposure compensation.

Use the center AF point only; this is the fastest and best way to obtain focus on the bird's eye, especially on larger birds. For smaller, fastermoving birds, you can use multiple focus points. This will allow the camera to choose an AF point from an array covering a wide area of the frame. On some models you can use as many as 51 focus points.

I've found that multipoint focus performs well on solid backgrounds such as blue skies, but doesn't work as effectively on varied backgrounds, such as trees and grasses.

Consider the sun and wind. Sunlight is crucial.
Late afternoon and early morning are the best times to

shoot, when the slanting light makes it easier to catch reflected sunlight in the bird's eye. This is what makes the bird look alive in a photo. Have the sun behind you at all times, with the subject in front of you.

Wind is also an important factor, since it will affect the bird's flight pattern. When they alight, birds always fly

into the wind. So keep the wind at your back if you want the bird to face you as it comes in for a landing.

Practice, practice, practice, practice! Photographing birds in flight is not easy. Enjoy the experience, and think positive. You may have a high failure rate in the beginning, but if you're persistent and go back again and again, you just may capture the action-flight shot of your life.

An avid birder for more than 20 years, Richard Ettlinger (www.richardettlinger.com) is the author of On Feathered Wings: Birds in Flight (Abrams, 2008; \$40). His work has appeared in Nature's Best Photography and Birder's World magazines and is currently on view at the American Museum of Natural History. He lives in East Rockaway, NY.

BLACK SKIMMERS, LIDO BEACH, NY: Nesting by the thousands each summer at Nickerson Beach Park on Long Island, these sea birds settle territorial disputes with razor-sharp beaks. Photographed by Richard Ettlinger using a Canon EOS-1D Mark II and 300mm f/2.8L EF-IS lens with 1.4X EF extender; aperture-priority exposure, 1/1600 sec at f/9, ISO 250.

Welcome to New Dimension in Photography: a Camera with Principles.

The camera for the artist in each of us. www.SIGMA-DP1.com

The built-in SLR-sized 14-megapixel image-sensor is 7 to 12 times bigger than that of an ordinary compact digital camera. The Foveon® direct image sensor captures all the RGB data on every pixel. The 16.6mm F4 lens uses large-diameter(14.5mm) aspherical glass molds for superior high-resolution and high-contrast performance. And the brand-new "TRUE" image-processing engine delivers new insight. Measuring just W:113.3mm x H:59.5mm x D:50.3mm and weighing just 250g, the SIGMA DP1 is the world's first and only integral-lens high-performance compact digital camera with SLR specifications. It's designed to deliver pure creative control and ignite your creativity.

Pico Iyer wrote that travel

provides the "luxury of leaving our beliefs and certainties at home, and seeing things...in a different light, and from a crooked angle." That's what photographer Michael Christopher Brown, now 28, found in 2005 when he went to China for the first time. Walking around Kowloon, Hong Kong, on his first day, he was fascinated by the scale of the buildings and signs.

"I really felt a connection with the place, even though I knew absolutely nothing about it," he says. "Everything was so huge, so unique in a way I had never seen before, that it had a very powerful effect on me. I had a sense [this] was going to change a lot of things in my life."

He was right: Since then, he's returned on assignment for *National Geographic* and others, and went back this summer to shoot the Olympics in Beijing. (You can see more of his work at www.mcbphotos.com.)

From the beginning, Brown has conveyed the tension between China's rapid modernization and its long history and deeply rooted culture. In the photo above, he juxtaposed Hong Kong's skyline and harbor with traditional-style lanterns.

Here is his advice for translating your insights into photographs.

Embrace serendipity.

When he's not working on a specific assignment, Brown is a street photographer who connects with what he happens upon. Even though he sees his subjects from the outside, he tries to impart his feeling of what it means to be on the inside, as well. "I'm fascinated by how mysterious and exciting it is walking around the streets," he says. "You follow your instinct and all of a sudden you're blown away by what you find."

Go wide. Use a wide-angle lens to frame an expansive scene such as this skyline and harbor. Since our eyes' field of view is almost 180 degrees, this can mimic our perception of vast space, drawing viewers in. A wide-angle lens also makes it easier to proportionally separate foreground elements (such as the lanterns) from one another and from the background. Here, Brown used a Canon EOS 20D with a 16-35mm f/2.8L Canon zoom, set at its widest focal length, a 26mm equivalent. Be sure to keep the camera and lens as level as possible and try to avoid unwanted distortion (sometimes you can reduce it in postprocessing).

Layer the sky. Skies can be great blank canvases. Find a strong foreground subject to fill the sky while positioning the horizon to create a frame within your frame (the Rule of Thirds helps). Here, the color of the lanterns pops against the overcast sky, and their angle in the wind makes the picture more dynamic. Both of these factors add to the emotional pull. "China can be very brown, but when you go into the cities, it's very colorful—more growth, more energy, more power," he says.

Lean to the right of your histogram. It's easy to forget that foggy, overcast days need more exposure to ensure contrast and shadow detail. Use manual exposure, or dial exposure compensation up +1 EV or so. But be careful not to blow out highlight details. Shoot RAW files to capture as much information as possible, then make the image look the way you want in postprocessing. "I'm always looking at the histogram curve," Brown says. "With RAW, I see where the curve is and let in as much light as I can." RAW format will give you much more flexibility in keeping noise to a minimum, too.

OUR WORLI Liz O. Baylen / Born in 1979, she graduated from Ohio University's School of Visual Communications in 2001 and began working for The Washington Times. She has covered assignments around the world and was selected as a finalist for the Pulitzer Prize while with The Washington Times. Most recently, her images have appeared in The New York Times and Los Angeles Times.

Photo data: SIGMA APO 120-400mm F4.5-5.6 DG OS HSM. Exposed for 1/2500 second at f/5.6

LIZ O. BAYLEN SHOOTS THE WORLD WITH A SIGMA LENS

A duck settles on the reflecting pool in front of the Lincoln Memorial. This humorous moment was captured by a telephoto zoom lens that incorporates Sigma's original OS (Optical Stabilizer) function. Compatible with digital SLR cameras, this lens reveals its strength when taking close-up shots. SLD (Special Low Dispersion) coated glass effectively corrects chromatic aberrations. Super Multi-Layer Coating reduces flare and ghosting. The HSM (Hyper Sonic Motor) provides silent, responsive autofocus action and full-time manual focus override.

A digital SLR-compatible telephoto zoom lens with Sigma's original Optical Stabilizer function.

TRAVELING PHOTOGRAPHER

By Miriam Leuchter

ALASKANOW

September is not too late

Sure, the days are growing

shorter and the air chillier. But humpbacks still ply the harbors, bald eagles swoop above, and glaciers continue to slide. Even as the tourist season winds down, there's plenty to photograph in Southeast Alaska. And if you can't make it this year, it's time to book a trip for next summer.

Big cruise ships are the most popular way to visit. For photographers, though, the best bet is a small-ship cruise, such as the "Alaska's Whales and Wilderness" Pentax-hosted photo tour, which Cruise West (www.cruisewest.com) invited me to take aboard its 84-passenger, 166-foot Spirit of Discovery out of Juneau in May.

Onboard, loaded with tips and Pentax equipment to lend, were pro shooters Kerrick James and Julie Quarry. I brought along a Pentax K20D, a variety of lenses (including the 50–200mm f/4–5.6 Pentax DA ED zoom I used for the photos in this spread), polarizing and split neutral-density filters, and a Manfrotto 695 Magfiber monopod to steady my 300mm f/4 Pentax DA* ED (IF) SDM lens.

We explored coves big ships can't reach. Inflatable craft took us to wooded shores. We drifted as whales sounded around us, female harbor seals nuzzled their pups, and bears foraged at water's edge. Knowledgeable "excursion leaders"

TRACY ARM: This ice-carved fjord, whose waterfall-laced walls soar as much as 2,000 feet straight up from the water, is home to North Sawyer Glacier and its twin, South Sawyer (above).

guided our sightseeing. And we visited with Tlingit people, whose ancestors first discovered this region's natural wonders.

Whether you go on your own or on a cruise, here's a handful of can't-miss photo ops in the Alaska panhandle. Be sure to pack protective gear for your camera—wet weather is the norm. (For more on how to capture Southeast Alaska, visit www.PopPhoto.com.)

KAKE: Originally a Tlingit village, the town lays claim to the world's largest totem pole. Other modern woodcarvings here include this double totem depicting the Eagle and Raven clans (above, right).

Gold-Rush Juneau

Alaska's capital started life in the gold-rush—you can photograph the ruins of the defunct mines on a couple of short and easy hikes just out of town. The busy Perseverance Trail, a 4-mile walk behind the city, leads past abandoned mining equipment and close to Ebner Falls to the Silverbow Basin. From downtown, take Gold Street to Basin Road, which ends at

the trailhead. Bring a tripod to cope with the dim light under the tree cover, and to smooth streams and waterfalls.

Glacier Bay National Park and Preserve

Tidewater glaciers and dense forest, humpback whales and Dall's porpoises, bald eagles and tufted puffins, black bears and grizzlies, seals and sea lions and otters—all overlooked by the Fairweather mountain range. This huge park has the scenery and wildlife you came to Alaska to see. You'll need a long telephoto lens (at least 300mm) to get close to calving glaciers and wary creatures, plus a wide-

angle lens to capture the sweep of this dramatic landscape. A monopod will help steady your DSLR aboard ship. For info, go to www.nps.gov/glba.

Sitka Once a center of Russian Alaska, and before that a Tlingit village, Sitka has become a major cruise stop. Photo ops abound: the volcanic cone of Mt. Edgecumbe, Sitka National Historical Park (with a big collection of totem poles), seals and bald eagles competing for fish in the harbor. Kayaking, biking, or hiking will get you closer to nature—or bring your underwater camera housing and go scuba diving or snorkeling (yes, they provide dry suits) with Island Fever Diving and Adventures (www. islandfeverdiving.com).

Tongass National Forest

The world's largest temperate rainforest encompasses more than 26,000 square miles, enveloping most of the Alaskan panhandle and its islands. Sitka spruce, hemlock, and red cedar soar above, while peat bogs called muskegs carpet the ground. A macro lens will capture the details and textures up close. Make some noise while you're shooting—you want the bears to know you're there so they won't be surprised to see you.

For more info, contact the Southeast Alaska Tourism Council, <u>www.alaskainfo.org</u>.

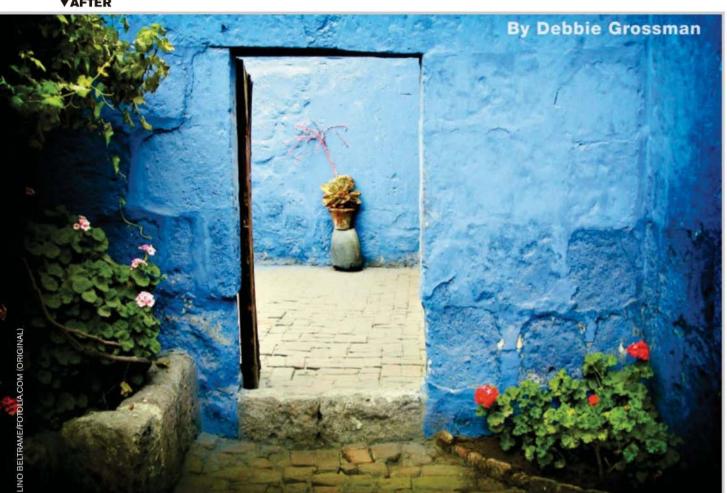

The Photoshop version of a junky plastic camera

Lomography started about 17 years ago when a bunch of photographers in Austria got their hands on a Russian camera called the Lomo LC-A. They loved the extra contrast, saturation, and big vignette that they got with the cheap little camera. Soon a movement was spawned, celebrating on-the-fly, messy, joyous photography. Like any movement that starts small and inspires many, the definition of lomography has expanded, and now includes all kinds of pictures taken with supercheap cameras.

While this digital version may not be the authentic filmic thing, the spirit of fun remains. Here are instructions for creating the Lomo look in Adobe Photoshop, but you can do it in Photoshop Elements, as well—just look for the color and contrast adjustments under the Enhance menu. Remember, the style is mutable, so experiment with these settings until your picture has the lo-fi feeling you want. Don't worry about getting exactly the same effect.

Once you've opened your photo, go to Image > Adjustments > Brightness/ Contrast. In the Contrast box, type 20, then click OK. Now go to Image > Adjustments > Hue/Saturation. In the Saturation box, type 20, and click OK.

Type M to get the Marquee tool. Next, set the feathering (circled) based on your picture's pixel dimensions-it should be about a tenth of the image's

smaller side. This is a 5MP image, so I'm going with 200. For a 10MP image, you'd set it at about 280, for an 8MP, 245. Now use the Marquee tool to draw a box around your whole image and make your feathered selection.

Invert your selection by holding down Ctrl + Shift + I (Command + Shift + I on a Mac) on the keyboard. Click the New Layer button (circled) in the Layers panel. Now fill the selected

area of your new layer with black by going to Edit > Fill. Choose Black as the Contents, and click OK.

To make the vignette more realistic, use the Blend mode pulldown menu in the Layers panel to switch to Overlay. Then go to Layer > Duplicate Layer and click OK to copy it, doubling the vignette effect. If that's not enough, do it again. Adjust the top layer's opacity if it's too much of a good thing.

DIGITAL TOOLBOX

The ESS Image Law Select Filter Analysis New Worker Falls

Click anywhere in your picture to deselect. Then click on the Background layer to highlight it, and click the New Layer button to set up a new blank layer on top of it. Change this one's blend mode to Overlay, as well. Check your toolbar and make sure the foreground color is set to white. If not, type D, then X on your keyboard.

Type G to get the Gradient tool. (If you get the Paint Bucket instead, hit Shift + G to switch to the Gradient.)

- 1900 to Face (1904) ----- Sub-level 16

In the Options bar, choose Radial Gradient (circled) and use the pulldown menu to choose the Foreground to Transparent type.

Now put your cursor in the center of your image, then click and drag to draw a line from that midpoint all the way to either of the outside edges. If the bright white light you made seems like it's overdoing it, bring the opacity down to a level you prefer.

PHOTO BOOKS

Tell your story with a Photo Book from Mpix. Our new Custom Hard Covers give you complete freedom to add vibrant, colorful images to the front and back of your book. Now your story starts before you even reach page 1.

Visit www.mpix.com to see our full line of photographic and press products.

BLACK

How to pull drama out of the darkness

Low-key is one name for the technique of shooting dark objects against dark backgrounds. And, if you're like many photographers, you're in the dark about it.

Why the confusion? Lightmeters reproduce the world mostly in midtones, so a camera's default exposure settings are usually useless for black-on-black scenes. Likewise, DSLR shooters who tend to "center the histogram" will wind up with murky grays instead of black magic. (Hint: Push histograms waaaay left.)

Low-key lighting also requires unusual attention to highlights. In conventional photos, highlights, shadows, and midtones together tell the story. But low-key images are built almost entirely of blacks and whites, with very few shades of gray. Contrasty, white highlights outline a subject's contours.

Your task isn't to light the dark but to highlight its edges and shapes. Lighting ratios for low-key images are often 8:1 (highlight to

shadow), compared with 3:1 for most photography and 2:1 (even 1:1) for high-key images.

Afraid of the dark? Don't be! These strategies will help...

- Pick subjects with care. Not every subject benefits from low-key lighting. It lends a somber, introspective, foreboding, even sinister air. Don't use it for four-year-olds or daisies. Wolves, yes; poodles, no.
- Forget fill lighting. Because low-key photos lack midtones, the usual rules for opening up shadows with frontal fill lights don't apply. Light for pitch-black, detail-free, "closed" shadows. Instead of frontlighting, place a single light behind, to the side, or-as Ryan Merrill did with his motorcycleabove the subject. Experiment with the light's position, angle, and intensity to maximize its ability to shape and contour.
- Make that light big. While one light is often sufficient, especially with reflective subjects, its surface

area should be as large as, or larger than, your subject. If Merrill had used traditional umbrellas or 16x16-inch softboxes to light this motorcycle, you would see individual hot-spots randomly reflecting off its black surfaces. They would give little clue to the bike's overall shape.

Instead, above the motorcycle, he suspended a diffusion panel that was twice as wide and half-again as long as the bike itself. Then, above the panel, he placed four Nikon SB-26 Speedlights to evenly backlight the diffusion panel. The unbroken reflections of that oversized diffusion panel create the extravagantly long, shape-defining highlights across the motorcycle's inky surfaces.

 Don't over-light. Fear is the first response of novice low-key shooters. They see a sea of black in the viewfinder, on the camera's LCD screen, and in inkjet prints, and immediately jack up strobe output, or tweak Curves or Levels to bring back the light. Don't! It's almost impossible to make this style of images too dark, and, as always with low-key, if you're going to err, err on the side of too dark an image, rather than too light.

Make viewers search for your subject.

Black, after all, is beautiful. immediately jack up strobe output, or

Put the Focus Where You Want

NEW!

FocalPoint

for Adobe Photoshop

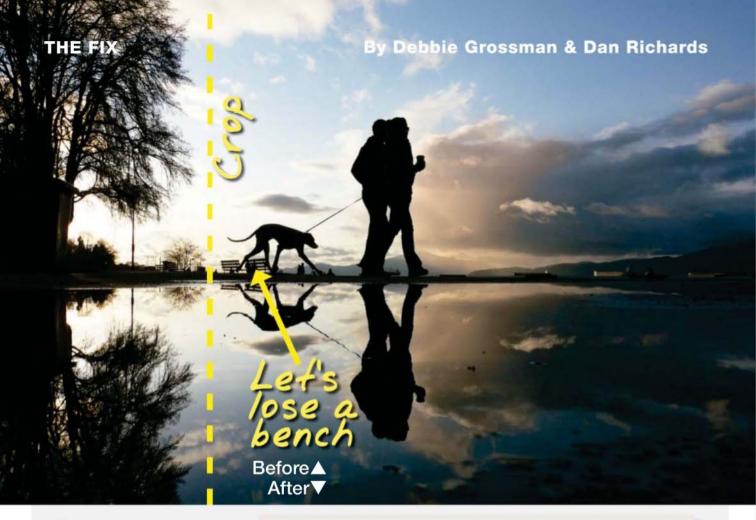

FocalPoint is the newest Photoshop plug-in from onOne Software, developers of award-winning plug-ins such as Genuine Fractals, Mask Pro, PhotoTools, PhotoTune and PhotoFrame. The new FocalPoint plug-in allows you to selectively add blur and vignettes to your digital photos so you can creatively draw attention to the part of your photo that is most important to you. FocalPoint takes the process of creating multiple layers with various types of blurs and layer masks in Photoshop and makes it as easy as adjusting a few sliders to get a high-quality, authentic look. Complete with a real-time preview of the blur and vignette, FocalPoint allows you to put the focus where you want it. FocalPoint plug-in for Photoshop, just another way that onOne Software gets you back to shooting.

Get back to shooting today with FocalPoint. For more information, free 30-day demo and video tutorials...

DOGGED PURSUIT Dave Bryson Vancouver, BC, Canada

The problem: Dave Bryson (www.davebrysonimages.com) put his camera on the ground and kept shooting as people walked, ran, or rode their bikes above the reflective puddle. "I got some strange looks, but it was worth it," he tells us. We have no problem with the picture except for the crop: Keeping the trees at the side, while ordinarily a good compositional device, distracts from the main subject, the dogwalkers and their reflection.

What now: We cropped to make the picture entirely about the couple and their dog. We weren't really bothered by the park benches behind the dog, but on further reflection, the Fix Team determined that it would really annoy the purists among our

readers if we cloned out one of the benches—so we did. Otherwise, we left the photo alone. In particular, we liked the subtle enhancement the photographer made to the sky in his original image editing. **Next time:** As we've said before, have the courage of your cropping.

Tech info: Panasonic Lumix DMC-FZ18, 1/500 sec at f/5.6, ISO 100. Warming of clouds and sky.

Before ▲ After▶

SHOT IN THE DARK Rachael Pettus Nikokleia, Cyprus

The problem: We think this is a very well-done photo—the silhouetted figure in the doorway is a nice touch in this street scene taken in Chania, Crete. But it's very dark. The original was quite underexposed, and the photographer had to lighten it with her RAW converter. We decided to take it a little further.

What now: Easier said than done. Working with the original NEF RAW file, we found that we couldn't lighten the picture very much without digital noise going through the roof. (Just goes to show you that dark noise can happen even with the remarkably un-noisy Nikon D80. The noise may not be evident at the size these images are printed here but, believe us, it's there.) We turned to a favorite Adobe Photoshop plug-in, nik Dfine 2.0, which provides smart noise reduction. It allowed us to lighten the image just enough to bring out more detail and add a bit more contrast for drama.

Next time: Watch those exposures! Trouble lurks when you underexpose.

Tech info: Nikon D80, 18-70mm f/3.5-4.5G DX Nikkor, 1/30 sec at f/3.5, ISO 1600.

■ Fundamentals: Use of color and texture to create a dynamic composition, landscape layering. ■ Color and texture: Without a hard line or even a horizon line, this image is nonetheless full of diagonals and triangles that keep your eye moving around the composition. The careful in-

camera cropping places contrasting

colors and textures against one another, creating a strong sense of shaping within a very impressionistic canvas.

Landscape: Photographer Guy
Tal establishes three distinct layers: the
bare trees in the foreground, the knot of
trees and yellowish foliage in middle,
and the purple mountain's majesty in
the far distance. The focus falls off from

sharp to less distinct with distance, emphasizing the three-dimensionality.

Time of day and lighting: A slight haze toned down the contrast so that the pastels came through, even with the sun fairly high in the sky. And, according to Tal, surrounding red-rock canyon walls (outside the image's frame) acted as natural fill reflectors.

Really Right Stuff

your camera support experts

custom camera L-plates – mount in landscape or portrait!

superior quick release clamps

top-quality ballheads

...and the best tripods available

from the ground up, Really Right Stuff® delivers gear you need

We design, build, aquire and sell the very best tripods, ballheads, quick-release clamps, and quick-release plates available anywhere. From the casual weekend shooter to the most demanding professional, discriminating photographers in over 80 countries around the globe rely on the experts at Really Right Stuff for all their camera support gear. Our quick-release system makes setup faster and easier, and better stability means better results. PICTURE DOCTOR

Break The Rules

RULE: Shoot at sunrise or sunset. Finding the right light is often harder than choosing a location, and even the most amazing settings will look drab and unappealing if illuminated poorly. Most photographers consider sunrise and sunset the magic times: The sun's light is directional and dynamic, and the sky is often lit in a variety of warm hues. What amazes me is how many photographers pack up as soon as the red fades from the sky. Sometimes the best images are taken well before or after the "golden hour."

For the first photo of San Francisco's Golden Gate Bridge, I photographed just as the sun began to rise and the clouds and sky turned a stunning orange. I used a Canon EOS 5D on a tripod with a 24–70mm f/2.8L lens at 24mm, 0.3 sec at f/14.

Unfortunately, this picture suffers from some obvious problems. Because of the imbalance in the exposure, I was left with a very dark and dull-looking bridge that merged into the black cliff. Photographing

the bridge's shape with split neutral-density filters was difficult, and

HDR (high-dynamic-range) imaging attempts looked too unnatural.

For the rule-breaking second shot, I knew that the sun would set over the Pacific Ocean, so I chose a site on the southwest side where the bridge would be frontlit by the last warm rays of the day. But haze and clouds swallowed the sun as it dipped below the horizon, stealing the fierce colors I'd hoped for.

Instead of leaving, though, I waited a half-hour to see how the light would change. With the sun gone, what little light left became soft and even, and the scene, while much dimmer, was easier to meter. The sun's departure also allowed the bridge's artificial lights to stand out.

I used the same tripod-mounted camera and lens, this time set to about 60mm, for a 30-sec exposure at f/14. The exposure is more even, and the slow shutter speed blurs the water, reflecting a misty glow from the bridge's lights. The artificial lights also create a warm contrast to the cool tones of the image.

—lan Frazier 😂

DELKIN DEVICES.

Making Photography Better

Is Your Camera Rugged?

Snug-It PRO

Custom molded for a glove-like fit and full functionality, Snug-it PRO skins provide complete protection with no extra bulk. These skins are made with durable silicone and include a hard plastic LCD cover for complete protection.

How Many Chargers Do You Have?

Dual Universal Battery Charger

You only need one! Charge any two digital camera batteries simultaneously, even your flash unit's AAs. Includes a car adapter for easy traveling & is 110/220V compatible for international use.

What's On Your Sensor?

SensorScope

Find out with SensorScope. Then, safely & effectively clean your sensor with the only complete digital SLR image sensor cleaning kit.

Are Your Cards Fast? Reliable?

Memory

SD PRO 150X

Don't worry about missing another shot to a memory card error. Delkin PRO cards are optimized for use in professional grade cameras, providing industry leading speed ratings and are backed by our hassle-free lifetime warranty. See camera store for prices.

Douglas Kirkland

"I happen to really like the people at Delkin but more importantly I have never been disappointed in any of their products. This summer I used the Delkin CF PRO UDMA cards in the dusty 100 degree plus outback of the Australian Northern Territories and didn't experience any problems after shooting thousands of images on the set of Baz Luhrmann's new film 'Australia'. What Delkin represents to me is: reliable products from a reliable company."

For more information on Douglas Kirkland, go to www.delkin.com/douglas

TIPS&TRICKS

Flop free Card readers dangling from my laptop drove me crazy, so to

regain my sanity, I turned to Velcro tape.

The photo tells the story. Jack Howard

Editor, PopPhoto.com

subjects when breezes pick up. The 6-inch variety are available everywhere, but you'll find the more useful 12-inchers in crafts stores, sold as "chenille" (French for caterpillar) stems.

Mark Buehl
Oregon, WI

An avid wildflower photographer, I pack my bag with some unusual photo tools. I never leave home without a few 12inch pipe cleaners, for example. I wrap them around stems to prop up droopy blossoms. They also help stabilize delicate

When cups runneth

The eyecups around SLR finder windows can come loose over time and get lost. (Ka-ching! They cost 20 bucks to replace.) Gluing them nixes use of most viewfinder accessories, plus it can mar plastic surfaces, and the fumes, over time, can erode camera circuitry. To keep my eyecup in place, I stretch a thin rubber band around the top of the finder flange. Then I slide the eyecup in place around the flange, and snip away any excess rubber. The cup stays put, yet I can still wiggle it free when necessary.

Dean Evangelista

Rockville, MD Ornamental photography

I enjoyed "Going Global" by Debbie Grossman (Digital Toolbox, September 2007). I have an old-fashioned alternative to that article's complicated technique. I tied a 25-cent silver Christmas ball to a string, with a small weight on the end and threw it over a tree branch. I set up a tripod under the ornament, zoomed in on the Christmas ball, and got a perfect 360-degree view of the pumpkin patch scene below, all without stitching software or multiple exposures. You, or your tripod, will show up in the center of the ball, but I cloned myself out quickly with some simple editing software.

Paul R. Lenz Colts Neck, NJ

Dioptimal adjustment

Setting a viewfinder diopter correctly to account for your eyesight can be confusing. But if you ever want to focus manually, or at least have a clue whether your autofocus chose the right target, you should take the time to do it right. One quick method I use is to remove the camera's lens, press the shutter button halfway to light up the infinder info, then use that to set the diopter. Simply adjust until the text is as sharp as it can be, and your diopter will be correct. Just be sure not to knock it out of whack by accident.

YOREBESTSHOT

Antique portraits are easy—with a white sheet, window light, and patience

Photographers of the late

Victorian and the Edwardian eras often captured their subjects as calm, confident, and self-possessed. With the right backdrop, light, posing, and photographic techniques, you can easily give your modern subjects that same transcendent look.

Facial expressions in portraits of that period were inanimate and grim, not because people were humorless, but because they couldn't hold facial expressions for the 30 seconds or more required for exposures. As a result, portraits

often had the solid appearance of marble busts. This look was actually considered chic by the standards of the reigning Pictorialist style of photography, which held that photos should imitate paintings and sculpture.

Can you coax similar expressions from family members and friends? You bet. Just have the subject sit still in front of the camera for a few minutes, while you pretend to adjust its settings and make the smallest of small talk. Soon, nervous fidgeting subsides, your subject relaxes, and (here's your cue to reach for the shutter release) boredom sets in. The good news: When the right moment comes,

your shutter speed will be a fraction of a second, and not minutes.

Other techniques for reviving the Victorian look:

- Use very flat, low-contrast light. This can be from a north-facing window or skylight, or shoot outdoors below an overcast sky or in the shade of a tree.
- Shoot verticals using a nondistorting focal length suitable for portraits (i.e., between 70 and 105mm). Avoid cropping into the head or hair, but, at the same time, don't allow the head to become too small in the frame.
- Use a simple white backdrop, preferably a slightly mottled or textured muslin, rather than stark white seamless paper.
- Shoot at or near maximum aperture for shallow depth of field.

Because Victorian-era photosensitive materials were really slow, photographers set wide apertures. These threw much of their subjects' hair and shoulders into soft focus, and eliminated creases and smudges in the white sheet or wall used as a backdrop.

- Focus carefully on the near eye.
- Dress your subject simply.
 Contemporary clothing (a print blouse or shirt) will sabotage this project.
- Go monochrome.
- Add an off-white tint. An image editor will help you produce the antique creamy tones common to print types of the era. Assuming you're starting from an RGB color image...

Delete two of the color channels to produce a monochrome image.
Smoothest complexions often result from using the red channel. To exaggerate freckles, as Charles Maraia did in his portrait (opposite page), use the green channel.

Convert the file to grayscale, save it, then convert back to RGB in order to add the color tint.

Create a blank, new layer and fill it with an off-white tint (250R/250G/175B, for example). Adjust the opacity and choose a Blend mode (I like Multiply) for an eggshell tint in the white background and low-contrast overall.

Will you want all of your portraits to take on this austere Pictorialist look? Of course not. But for one or two subjects, it can be fun to embark on this photographic trip back in time.

BY PETER KOLONIA AND JULIA SILBER STEP UP TO **DISTANT SPORTS** (without getting wet). That's what Ryan Anson did with a 70-200mm f/2.8L Canon EF zoom and 2X teleconverter on a Canon EOS 5D at a California surf contest last winter.

Feeling hemmed in by the 18–55mm lens that came with your DSLR? Yearning for something longer to grab sports or wildlife subjects with crisp detail and vibrant color? Or a wider focal length to embrace the entire family around a holiday spread?

You're in luck. A new breed of lens combines highcaliber optics with low-impact prices. The Pop Photo Lab is testing sharper and more distortion-free glass than ever—across the pricing spectrum. Indeed, so many lenses now earn our highest ratings that we will soon need to raise our test standards. Again.

Lens makers are honing their acts in several ways. First, they're refining aspheric lens elements. Unlike most elements, which are round, these taper and then flare out toward the edges. Made of ground or molded glass, or glass-and-plastic hybrids, they improve sharpness, especially at the image edges and at wider apertures, while allowing for smaller, lighter lenses.

Control of chromatic aberration is also improving, thanks to dropping prices of low- and super-low-dispersion apochromatic glass. These purer forms of glass focus all wavelengths to the same plane, reducing color fringing and increasing sharpness.

Finally, image-stabilized lenses are becoming more refined and less expensive. Canon and Nikon, which use lens-based stabilization, have been forced to keep a lid on pricing to compete with camera systems that have sensor-based, in-camera IS.

So if you want a lens that's better-built, faster, and sharper—for an unquestionable impact on the quality of your photography—read on. (You can find our full test results for each at www.PopPhoto.com.)

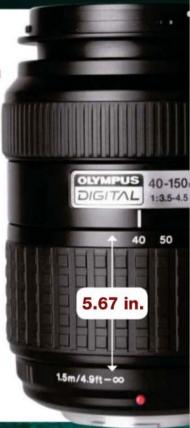

To reach out and put distant wildlife and sports action smack in your face, put a tele zoom on that DSLR. Each profiled lens offers something phenomenal, including a few kit zooms that are kit zooms in price only.

TYRO'S TELE Olympus Zuiko Digital 40–150mm f/3.5–4.5 AF

■WHY IT MATTERS: Four Thirds shooters will like its reach (an 80–300mm equivalent), smooth handling, and easy-on-thewallet price.

wirtually all Olympus lenses, it's sharp. Many longer zooms at this price level typically dip into the Very Good or even Good ranges at longer focal lengths, but this Zuiko produced Excellent SQF numbers across the board. Distortion control is phenomenal—within or very close to the Imperceptible range at all tested focal lengths.

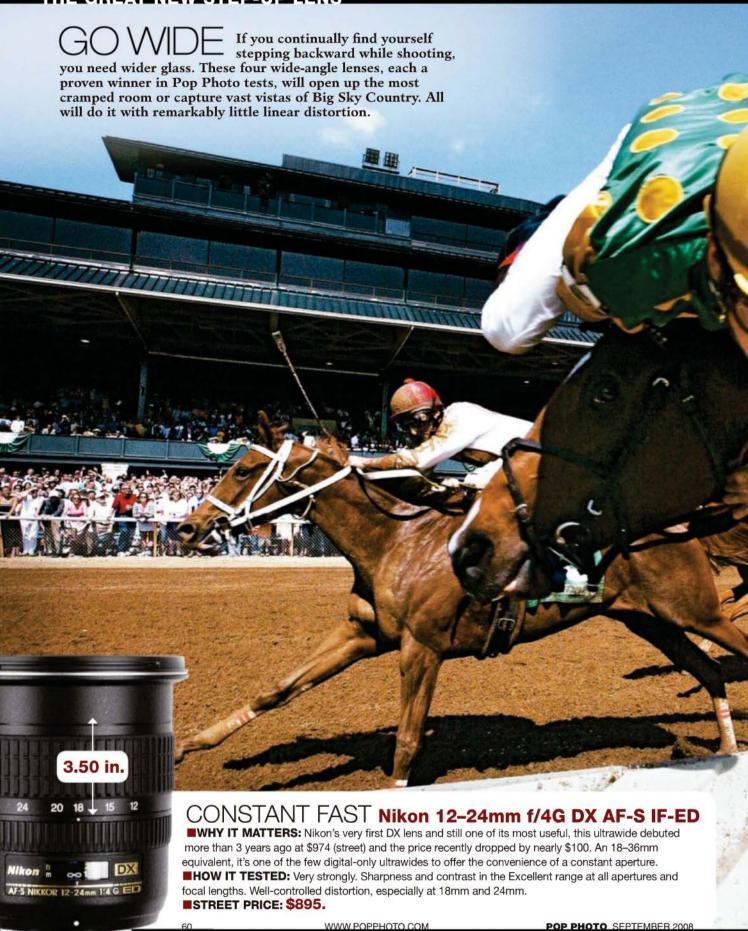

■STREET PRICE: \$260.

THE GREAT NEW STEP-UP LENS

EASY WIDER Canon EF-S 10-22mm f/3.5-4.5 USM AF

■WHY IT MATTERS: Weighing just 13.6 ounces, Canon's widest digital zoom is also one of this category's lightest. Its widest setting of 10mm (16mm equivalent) gives you a significantly broader view than the 12mm maximum typical of the competition.

well-controlled distortion, even at 10mm. Its tight 9.4-inch close-focusing distance provides great subject magnification—1:6 at 22mm, among the top-performing wides.

GRAND SWEEP Olympus Zuiko Digital ED 7-14mm f/4 AF

■WHY IT MATTERS: This is the widest non-fisheye zoom for DSLRs with less-than-full-frame sensors. A 14–28mm equivalent, it could form the base from which to build a grand, pro-grade Olympus or Panasonic system.

■HOW IT TESTED: Extremely well. Sharpness and contrast were uniformly Excellent; distortion was amazingly well controlled, even by non-ultrawide standards; and at two of three tested focal lengths, it showed no discernible light falloff at the edges.

■STREET PRICE: \$1,595.

ALPHA ADD-ON Sony 11–18mm f/4.5–5.6 DT AF

WHY IT MATTERS: The widest lens Sony makes for its Alpha-series DSLRs, it's unofficially mated with a 18–200mm for a versatile, broad-ranging optical system.

■HOW IT TESTED: Superbly.

Sharpness and contrast, both in the Excellent range. Barrel distortion at 11mm was surprisingly well controlled—and at the longer focal lengths, even better. It also provided one of the more powerful maximum magnification ratios in the category, 1:7.13 at 18mm.

■STREET PRICE: \$650.

THE GREAT NEW STEP-UP LENS

GO BEYOND

Are you excited by extremely wide-angle, low-light, or close-up photography? Stellar lenses for each have run the gauntlet of Pop Photo's optical bench tests.

Here are three to consider:

FISHEYE VIEW Pentax SMCP-DA 10-17mm f/3.54.5 AF Fisheve

■WHY IT MATTERS: A rare

fisheye zoom, it combines the mind-blowing visual excitement of a traditional full-frame (non-circular) fisheye with the convenience of a zoom. Canon and Nikon shooters can get the same effect with Tokina's 10–17mm, essentially the same lens with different mounts.

■HOW IT TESTED:

Magnification is nothing short of astonishing—1:2.6 at 17mm with a 5.25-

inch close-focus distance. Yes, there's distortion, but as with all fisheyes, it's so over the top that you gotta love it! **STREET PRICE:** \$430.

RIGHT PRICE

Tamron 70–200mm f/2.8 Di LD Macro AF

■WHY IT MATTERS: A full-

frame macro that's bright, well built, and sharp, it could be a pro's bread and butter. Especially suited to portraiture, close-ups, and event and wedding photography, its true forte is financial: There's no full-frame, constant-aperture f/2.8 in

the pro class that's close to its price.

Available in Canon and Nikon mounts (Pentax and Sony coming soon).

on DSLRs with APS-sized sensors.
Sharpness was in the Excellent range at all tested focal lengths and apertures. Distortion and corner vignetting were very well controlled, and the 1:2.8 magnification ratio (at 200mm) bodes well for macro maniacs. Not the fastest-focusing or quietest lens, but it's very attractive nonetheless.

■STREET PRICE: \$700.

1:1 WINNER Tokina 100mm f/2.8 AT-X Pro D Macro AF

WHY IT MATTERS:

Irresistible to almost any closeup photographer, this lens magnifies to 1:1, offers a bright and constant aperture, covers the full frame so it can be used with any Canon or Nikon SLR or DSLR, and is among the least expensive lenses with all these gifts. It's also well-suited to portraits and low-light work.

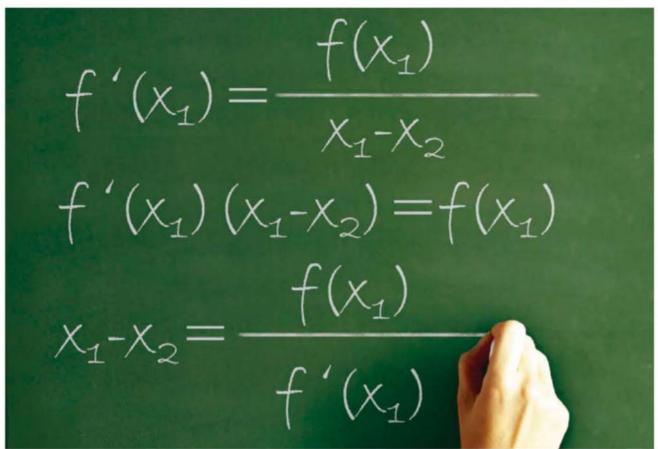

flat-field macro, it shines with all close-up subjects, such as maps, photos, and paper money. Our tests found Excellent edge sharpness at close focus, even out to f/2.8. With three focusing ranges (close-up, non-close-up, and full) and flare-suppressing multicoatings, this affordable full-framer would be hard to resist, even if you're not into conventional close-ups.

■STREET PRICE: \$400.

STEP UP TO TINY SUBJECTS (and make them huge). Betsy Dallas blew up a dandelion with a Canon 100mm f/2.8 macro and EF 25 extension tube on a Canon EOS Rebel XT.

Y DALLAS, BETSYDALLASPHOTO.COM

GET A GRIP ON CALCULUS

Calculus has made it possible to build bridges that span miles of river, travel to the moon, and predict patterns of population change. Yet for all its computational power, calculus is the exploration of just two ideas—the derivative and the integral both of which arise from a commonsense analysis of motion. Master them and you'll open a new world for yourself!

So why didn't you grasp calculus the first time around? In school, many of us didn't continue with mathematics and so this great achievement remains a closed door. And for those of us who did, Professor Michael Starbird can correct the clumsy classroom delivery that hid the beauty of calculus. In Change and Motion: Calculus Made Clear, 2nd Edition, the concepts and insights at the heart of calculus take center stage—with you in a leading role.

This course is one of The Great Courses', noncredit recorded college lecture series from The Teaching Company*. Award-winning professors of a wide array of subjects in the sciences and the liberal arts have made more than 250 college-level courses that are available now on our website.

Order Today! Offer expires Friday, October 17, 2008

Change and Motion: Calculus Made Clear, 2nd Edition Course No. 177

2 parts, 24 lectures (30 minutes/lecture)

Change and Motion: Calculus Made Clear, 2nd Edition

Taught by Professor Michael Starbird, The University of Texas at Austin

Lecture Titles

- 1. Two Ideas, Vast Implications
- 2. Stop Sign Crime The First Idea of Calculus-The Derivative
- 3. Another Car. Another Crime-The Second Idea of Calculus— The Integral
- 4. The Fundamental Theorem of Calculus
- Visualizing the Derivative-Slopes
- Derivatives the Easy Way-Symbol Pushing
- 7. Abstracting the Derivative-Circles and Belts
- Circles, Pyramids, Cones, and Spheres
- Archimedes and the Tractrix
- 10. The Integraland the Fundamental Theorem
- 11. Abstracting the Integral-Pyramids and Dams

- 12. Buffon's Needle or π from Breadsticks
- 13. Achilles, Tortoises, Limits, and Continuity
- 14. Calculators and Approximations
- 15. The Best of All Possible Worlds-Optimization
- 16. Economics and Architecture
- 17. Galileo, Newton, and Baseball
- 18. Getting off the Line-Motion in Space
- 19. Mountain Slopes and Tangent Planes 20. Several Variables-
- Volumes Galore 21. The Fundamental
- Theorem Extended 22. Fields of Arrows-
- Differential Equations
- 23. Owls, Rats, Waves, and Guitars

THE WORST SUBJECTS CAN MAKE THE BEST PHOTOS TEXT BY JAY MALLIN

What's worth photographing? Where can you find beauty, or meaning? Just about anywhere—even in the trash bin. Here are three different visions of how refuse can be embraced.

Chris Jordan (www.chrisjordan.com), found his future in a pile of garbage.

Jordan, now 44 and living in Seattle, is a former attorney who's loved photography since early in law school. But he didn't work up the courage to

BEAUTIFUL

pursue it full-time until he faced the prospect of marking a major birthday sitting in a corporate law office.

"As I approached 40, a new fear

surfaced—the fear of not having lived my life," he says.

So he quit his job and set out as a photographer, bringing with him a nest egg he hoped would last two years to get established as an artist. TALK IS CHEAP: To make "Cellphones Orlando 2004," Chris Jordan used a large-format view camera (technical details not available) to shoot a heap of discarded phones.

AUTO EXPOSURE: Jordan photographed this piece, "Crushed Cars," at a facility in Tacoma, WA, where he found 130,000 tons of cars waiting to be shredded and shipped to China. He used a large-format view camera and sheet film (technical details not available).

He was interested in beautiful images, working with an 8x10 view camera and developing his own theory of color aesthetics.

Then one day Jordan photographed a garbage heap. He was attracted to the colors, finding them an unlikely demonstration of his theories. He made a huge print, hung it in his studio and invited a couple of photographer friends over to see it. The friends "started talking about consumerism," he recalls. "It was annoying to me because I wanted to talk about my color theory."

Eventually, though, the idea of the waste of consumer society—the glut of trash, electronics, packaging and the rest discarded daily—broke through. Jordan was fascinated, and horrified. The discovery "was like waking up from *The Matrix*. I discovered this really important issue. It's just this shock."

And his future course of photography was set.

Jordan still strived for beauty, but now it was as a means, not an end. He studied photographers such as Richard Misrach, whose beautiful photos depict the often-ugly effects of humans on the landscape, showing the impact of practice-bombing in the desert or waste dumped into the Mississippi River. Jordan thought the same concept would apply to consumer waste. "Beauty can be a very important tool for drawing the viewer into the conversation," he says.

Shooting on location (in later photos, in the studio), Jordan would create a pretty image of, say, vast numbers of discarded cell phones, giving them a pretty swirl to evoke a galaxy.

But, concerned that his photos were so attractive that people would ignore the message, Jordan set out to create "the ugliest photo I could ever make." His subject? Exactly 125,000 cigarette butts, the number discarded around the world every second. He made the image by photographing 5,000 cigarettes over and over again, combining the digital images and printing the result at a huge 5x10 feet. Viewed up close, the fine detail can be disgusting, says Jordan. "You can see the lipstick on a butt."

Still, when these less-pretty images were first shown in New York and elsewhere, "it turns out that they were by far the most popular images in the series," he adds.

For Jordan that was a revelation. He plans to keep working along similar lines, shooting the discards of

the consumer world and bringing life to statistics—for example, the 426,000 cell phones discarded in the U.S. daily—that might otherwise be too dry to have an impact.

While these images may be beautiful, they won't be pretty, he says. "My idea of what is beauty has changed a lot."

Charles Rushton (www.crushton.com), 65, remembers that as a kid in Rochester, MN, in the 1950s, a friend told him something he'd just read in Popular Photography: "'This guy said there're enough photographs within a mile of your house to last you a lifetime. What do you think of that?' I said something like, 'I don't think he lives in Rochester."

But the idea stuck with him. Now enjoying a second career as an adjunct instructor of digital photography in Norman, OK, Rushton takes his Nikon D80 and an 18–135mm f/3.5–5.6 Nikkor lens out on walks, often around the lake near his home. Sometimes he has a goal when he sets out, but that's not really important. "I photograph anything that catches my eye—I don't plan things. Usually I end up photographing something other than what I went out to photograph," he says. "You need some reason to get out, but once you get out there, you need to remain open to whatever comes your way."

One day by the lake, Rushton noticed submerged trash, some of it waste from nearby home construction. He took some photos and thought about them. "The little light bulb went off in my head, and I thought, I'm going to do my own personal recycling

WINE COOLER: To get these colors, Charles Rushton spent a lot of time in Photoshop. Nikon D80 with kit lens at 50mm. Exposure: 1/100 sec at f/4.5, ISO 100, plus 1/3-EV exposure comp.

program by photographing trash and turning it into beauty."

Waste is a surprising subject for someone who once studied with Arnold Newman and who recently had a book of black-and-white portraits published by a museum.

Rushton once shot a flattened juice can in the snow, thinking it would look great. But later, working with the image on his computer, he found it less interesting. Better results came from an empty roof-shingles bag he saw in the lake. Its watery twists and turns provided striking photos on two successive days. "One day it was a nightmare head, and on another day it was an interesting little man."

For him, water and ice yield the best effects. "I particularly like the effect of water on trash," he says. "I'm not that interested in trash itself—I'm interested in how nature transforms it. It's the action of the water twisting it and shaping it, and the sun fading things. These are the things that make the pictures interesting, I think."

Once he captures the image, Rushton makes his own contribution to transforming the materials. He shoots in RAW so that he can make dramatic changes to the white balance, contrast, and color saturation.

Where does he find his subjects? In addition to the lake, he likes "the ditch near my house" and "my favorite ditch," near a mobile-home park. He also recalls the long-ago comment in Popular Photography about there being so much to shoot so close to home.

"I've thought about that my whole life, on and off," Rushton says. "I realized eventually that what it spoke to is the concept of what's a legitimate subject of a photograph. Once you've

got over the stereotyped notions of what's worthy of being photographed, all of a sudden this whole world of images opens up to you."

Want to Play in the Dirt? Get a Different Lens Filter.

New Tiffen Digital HT™Filters Deliver Superior Performance

Now there's a line of high performance lens filters that's as tough as all outdoors. New Multi-Coated Tiffen Digital HT-Trans™ filters combine Academy Award winning ColorCore® technology and outstanding optics for superior performance with remarkable scratch resistance, worry-free

cleaning, and rugged durability.*
They can make all the difference when you're shooting in dusty, dirty or any environments.

Our Digital HT filters, with Anti-Reflective and High Transmission characteristics, transmit nearly 99% of light. And with a low-profile titanium finish ring and antireflective black locking ring, you have a precision lens filter that's built to last.**

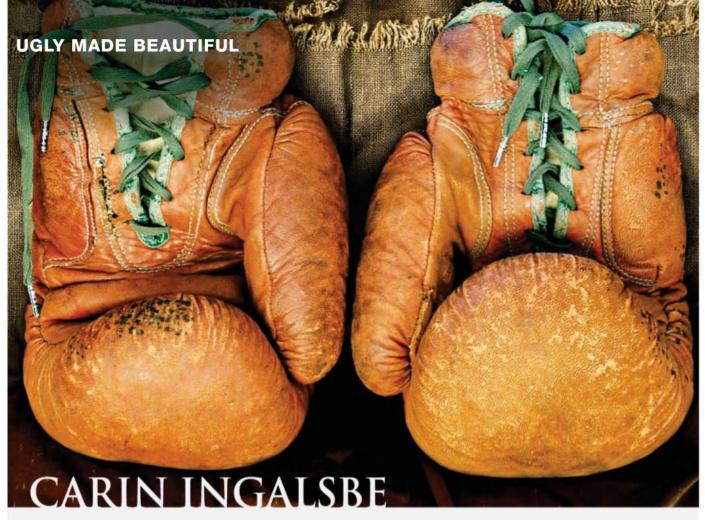

Want to know where you can get your hands on the tough Tiffen Digital HT Filters with ColorCore® technology? Visit tiffen.com today. And start making plans to go play in the dirt.

TIFFEN DIGITAL HT FILTERS:

REVOLUTIONARY BREAKTHROUGH IN LENS TECHNOLOGY

*Digital HT Trans Filters surpasses military specifications based on testing by the Rochester Institute of Technology **Ten-year warranty on any manufacturing defects.

Carin Ingalsbe (www.cariningalsbe, com) scours the world's opera, theater, and ballet companies—for dirty laundry. Specifically, old costumes that are torn and stained. Some are centuries old, even royal hand-medowns. Others have seen decades of use, since a new tutu can cost \$10,000. She photographs them, creating large and stunning prints.

When Ingalsbe, 47, arranges to visit a costume archive, she explains what she wants, but it never sinks in. "When I get there, they always have all the perfect dresses out, and I can never work with them," she says.

So she looks around until she sees an old garment in a plastic bag or dusty box, then asks to shoot it, often to the horror of the wardrobe staff. "The patina and the grunge is a singular road that can only be traveled once," she says. It records "every pair of hands that has ever touched it. That is a really priceless thing."

Five years ago, Ingalsbe had no interest in ballet, theater, or costumes. But she had a big car and junk-dealer friends who needed help hauling 200

70

PUNCH-DRUNK GLOVES: Carin Ingalsbe bought these boxing gloves on eBay. Tripod-mounted Nikon D80 and kit lens at 44mm, in indirect sunlight, 8 sec at f/16, ISO 100.

gowns owned by a retired cabaret singer. She documented them and was surprised by the beauty of her photos.

Shortly after, she read that the New York City Ballet had problems maintaining its costume collection. So she offered to shoot the archive and sell prints, with a portion of the proceeds going to the ballet. The gambit worked: She was even allowed to take two pieces designed by painter Marc Chagall to her studio in Lexington, MA, and her prints were shown in New York's Lincoln Center.

Since then, she has traveled to Paris, where she found costumes stored in a large stone building "that looks like a barn." In Stockholm, where she had to fight off pigeons coming through the window she was using as her main light source, garments were arranged in large, acid-free boxes in a way that reminded her of human bodies.

Ingalsbe often stitches together multiple macro shots in Adobe Photoshop to create her big prints. She also uses the software to remove what she calls the "biomatter" in old costumes. But she's no photo technician—she couldn't name the camera she used without looking. (It's a Nikon D80, with which she shoots JPEGs.) She explains she doesn't want "to get so enamored with the technical stuff that I forget what I'm looking at."

Her new subject? Gloves. Often made for heavy use (such as boxing or gardening), they get worn out in a way she finds compelling. But buying on eBay presents a typical problem, with a twist: She can't see the item in detail until it arrives by mail. "A lot of times

what I get is not beat up enough, so I can't use it," she says. "I actually threw away a bunch of baby shoes yesterday. They weren't mucked up enough."

Quantaray by Sunpak. Better products. Better pictures.

Tripods, flash, digital frames...and more!

Ritz has all the accessories you need to take better pictures and then beautifully display them.

You'll always find the right Quantaray by Sunpak or Sunpak tripod at Ritz. For easy travel, consider the ultra-compact Quantaray by Sunpak QSX 1002XL tripod, which stows anywhere. Or the remarkably light and agile FlexPod that lets you set up your camera on just about anything from tabletop to fence post.
So no more excuses for leaving your tripod at home!

And if you own a Canon or Nikon digital SLR, you'll want the Quantaray by Sunpak QF30 flash. This smart flash with advanced TTL technology is engineered to be fully compatible with your camera. And it's guaranteed to give you clearer, sharper, brighter pictures, every time.

Then keep your flash going with lasting power. Choose one of our high-quality Quantaray by Sunpak chargers, like the Quantaray by Sunpak 60 Minute Ultra. And add a set of our high-output Ni-MH batteries so you don't miss a picture opportunity.

If you're into cataloging or selling, it's hard to beat our new eBox portable studio system for professional tabletop photography, ready to go with reversible background, lights and compact tripod.

Finally, there's no easier way to show off your latest digital images than in our new range of digital photo frames. We have one in the perfect size for you.

Compare quality, features and price, and you'll choose from the wide range of Quantaray by Sunpak and Sunpak products at your nearby Ritz Camera Center.

GREAT PHOTO GEAR THAT WON'T TAKE YOUR BOTTOM DOLLAR

AUTUMN IS HERE—WHICH MEANS THAT NEW PHOTO EQUIPMENT IS ARRIVING FAST AND FURIOUS. IT'S ALSO THE SEASON FOR BARGAIN HUNTERS: WHETHER LAST YEAR'S MODELS, OR EXCESS INVENTORY, OR JUST PLAIN GOOD DEALS FROM THE START, YOU CAN FIND GEAR YOU NEED OR WANT AT EXCELLENT PRICES. AND SO WE'VE MADE A SELECTION OF WHAT WE THINK ARE THE BEST DEALS IN CAMERAS, LENSES, AND ACCESSORIES.

REBEL WITHOUT A PAUSE

WHO? You want to get into the Canon EOS system, but don't want to spend more than 700 bucks for a new

camera. WHAT? Canon EOS Rebel XS with 18–55mm f/3.5–5.6 Canon EF-S IS lens. WHY? It's rare that a brand-new item makes it into our Top Buys, but given what you get with the Rebel XS—10.2MP capture, DIGIC III processor, big burst capacity, high-capacity battery, Image Stabilizer lens standard—we'll make an exception. You can read all about it in our Hands On in this issue. NOW! \$700, STREET, WITH KIT LENS.

EXTRA ZOOMPH

WHO? Those who want a 10MP camera with heavy optical firepower but not a DSLR. WHAT? The Fujifilm FinePix S1000fd. WHY? Fuji's take on the electronic-viewfinder camera has a 12X zoom (33-396mm equivalent f/2.8-5), 2.7-inch LCD, face detection with automatic redeve removal, and a panorama mode that will stitch three shots together in-camera-no computer or extra software required. We wish it used a rechargeable Li-ion battery rather than four AAs but, given the price, you can afford to buy several sets of NiMH AAs and a charger. **NOW! \$215, STREET.**

EASY SNARE

WHO? Point-and-shooters who want a lot of reach in a small package. WHAT? Kodak EasyShare Z8612 IS. WHY? EasyShare cameras represent some of the best values in compacts. Case in point: The 8.1MP Z8612 has a 12X zoom, a 36–432mm equivalent f/2.8–4.8 Schneider optic, in a body that's not

much bigger than some 5X zoom compacts. It has only the LCD for viewing, as it has no EVF, but the lens-based image stabilization will help steady your shots. You can use a full assortment of auto modes, or go fully manual. It plays stills back in HD wide format, and it works with an EasyShare Printer Dock.

NOW! \$220, STREET.

GRAND PACKAGE

WHO? Serious shooters looking for a one-lens workhorse. WHAT? Nikon D80 with 18-135mm f/3.5-5.6G AF-S DX Zoom-Nikkor IF-ED lens. WHY? While 10MP DSLRs have proliferated in the past two years, one of the originals, the 10.2MP D80, remains one of the best. It combines leagueleading resolution with excellent noise control (Moderately Low noise at ISO 3200, by our tests). Autofocusing is speedy and works down to EV -2, a light level best described as available darkness. One of our favorite features: the ability to color-correct RAW files and convert to JPEGs in-camera. This kit pairs it with the 18-135mm lens, about 27-200mm in 35mm terms. In our SQF tests, it tested in the Excellent level throughout the focallength range. The leading-edge crowd might nitpick the 2.5-inch LCD and the lack of Vibration Reduction with this lens, but given that this combo costs \$300 less than when it was first introduced, we're not complaining. NOW! \$1,000, STREET.

PRICE DIVE

who? Deep-sea enthusiasts with shallow finances. what? Olympus E-520 with 14–42mm f/3.5–5.6 Zuiko lens, PT-EO5 underwater housing, and lens port for the kit lens. why? A high-quality underwater housing for a DSLR alone can cost you \$2,000. Olympus has figured out how to give you a whole outfit for nearly that price.

New Portrait Professional 8 for PC & Mac.

www.PortraitProfessional.com

TOP BUYS 2008

The E-520 and kit lens (\$700, street) put up Excellent image quality results in our tests, and the lens is a sharp one. The PT-E05 housing (\$1,100, est. street) is made of polycarbonate, with a new double-waterproofing structure and rotary buckle for easy opening. It is rated for maximum depth of 40 meters (about 130 feet). A double strobe connector allows the use of a dual-strobe system. You'll need a port for any lens you use; the one for the 14–42mm runs about \$380, street.

A WIDER ZOOMER

WHO? You want wider than 35mm. but also longer than 100mm, WHAT? Panasonic Lumix DMC-FS5. WHY? Panasonic continues its tradition of giving you more zoom with your compact with the FS5, which sports a 4X, 30-120mm equivalent f/3.3-5.8 zoom. This 10.1MP camera has Intelligent Auto (iA) mode that essentially automates everything, lens-based image stabilization, a 2.5inch LCD that adjusts brightness automatically, and three different aspect ratios, including wide-screenboth still and video. A 2MP burst mode lets you blast off 6 frames a second. A very capable little camera. NOW! \$205, STREET.

TERRIFIC TENNER

WHO? The family record-keeper on a squeaky tight budget. WHAT? Samsung Digimax L210. WHY? It's the sort of camera that makes you ask, How did they do it? An aluminum-bodied 10.2MP camera with 3X zoom (34-102mm equivalent f/2.8-5.2), 2.5-inch LCD with auto brightness adjustment, lens-based image stabilization, face detectionit's all there. And it has extras like self-portrait mode (keeps you from cutting your own head off), color filter effects, auto contrast balance to keep the dynamic range under control, and basic in-camera image editing. **NOW! \$170, STREET.**

CHEAPER BY THE DUO

WHO? DSLR buyers who want humongous focal-length range, right out of the box. WHAT? The Sony Alpha 200 kit with 18–70mm f/3.5–5.6

HAMMALALIN ! and 75-300mm f/4.5-5.6 Sony DT lenses. WHY? Given the 1.5X lens factor of the Alpha 200, these lenses work out to a combined range of 27-450mm in 35mm terms. And remember that you get image stabilization with both, as the A200 has sensor-based stabilization that works with any optic you can put on the camera. The camera itself can produce resolution of over 2000 lines, and the noise control-wait a minute, you can read the whole test in this issue. If this isn't a deal, nothing is. NOW! \$700, STREET.

HD IN THE HAND

WHO? HDTV owners who want a small camcorder to make high-def home movies. WHAT? The Sony Handycam HDR-CX12. WHY? Since this highdefinition Handycam stores its video to little Memory Stick PRO Duo flash memory cards, Sony was able to make it much smaller than the MiniDV models you remember from the last time you bought a camcorder. Sony also has a reputation for better-than-average still images from its HD camcorders, so this model's 10MP stills should be better than the ones you get from most camcorders. The CX12 also sports a 12X optical zoom lens with Super SteadyShot optical image stabilization, a 2.7-inch Clear Photo Plus touch screeen LCD, and a 5MP ClearVid CMOS sensor with Sonv's Exmor technology. NOW! \$900, STREET.

FAST FROM THE PAST

WHO? Pentax and Samsung DSLR shooters who want a super-speed portrait and available-light lens. WHAT? 50mm f/1.4 Pentax SMCP-FA lens. WHY? You know how we keep telling you that the classic fast 50mm lens is a great accessory for digital SLRs? Given the 1.5X lens factor of cameras like the Pentax K20D and Samsung GX-20, the 50mm becomes effectively a 75mm short tele. In our Lab tests, this optic scored Excellent sharpness and produced almost no distortion. Just how bright is f/1.4? Going from an f/2.8 lens to an f/1.4 is like going from ISO 400 to ISO 1600-but without the noise. NOW! \$200, STREET.

TOP BUYS 2008

SHAKE YER SIGMA

WHO? You want a wide-to-tele zoom with image stabilization, at a price that won't give you the shakes. WHAT? Sigma 18-200mm f/3.5-6.3 DC OS AF lens. WHY? Nikon shooters save nearly \$200 over the Nikon VR lens of the same focal length. Canon shooters save nearly \$2,000 (!) over Canon's own 28-300mm f/3.5-5.6L EF IS. About 29-300mm in 35mm terms, the Sigma alternative has image stabilization that's good for an extra 2 to 3 stops handholding (tested), and has a sensor that detects panning motion and autoswitches to single-axis stabilization. Our tests in the Pop Photo Lab found Excellent sharpness and contrast throughout the focal-length range—better than most of the competition. That f/6.3 aperture at full tele is a little dim for our tastes, but that's what the OS is for. NOW! \$500, STREET.

FOR CLOSER ENCOUNTERS

WHO? Close-up enthusiasts who have been keeping their distance from pricey macro teles. WHAT? Tokina 100mm f/2.8 AT-X Pro D Macro AF. WHY? The most useful macro lenses are those in the short telephoto range, as they give you extra working distance, important if you're photographing a small and skittish creature. But these optics can carry a heavy price tag. The Tokina, while hardly a giveaway, comes in around \$90 to \$360 less than comparable lenses from camera makers. What do you give up? Exactly nothing-in our Lab tests, the Tokina put up Excellent performance at all magnifications, plus distortion control among the best we've ever seen in this class. And it's a full-framer, not digital-only. **NOW! \$400, STREET.**

1,000 GIGS IN ONE JOINT

WHO? Prolific photographers—like you! WHAT? Buffalo 1 Terabyte DriveStation Combo TurboUSB External Hard Drive. WHY? With a terabyte of storage (that's slightly more than 1,000 GB), you can rest assured that you'll have enough space to store or back up everything

you shoot. This DriveStation uses Buffalo's TurboUSB technology, so your data transfers extra fast (or choose FireWire if you prefer). And the included Memeo AutoBackup software takes charge of making sure that every picture you store on your PC will be there, just in case your PC isn't. NOW! \$250, STREET.

CARD SCORE

WHO? You want to keep shooting without flipping those memory cards in and out. WHAT? Sandisk 8GB Extreme III SDHC card. WHY? With the megabytes going up and up, and RAW capture on the increase. serious shooters may develop serious memory problems. But you can keep on shooting with a high-capacity card like the Sandisk Extreme III. It has Class 6 transfer speed (that means really fast) and is rated for use in very hot or very cold conditions. The price includes a MicroMate mini USB 2.0 card reader and RescuePRO software. NOW! \$80, STREET.

RELIEF WITH TWO TABLETS

WHO? Frustrated Photoshoppers. WHAT? Wacom's line of Bamboo Fun tablets. WHY? Anyone who attempts to do any selecting or delicate retouching with a mouse knows the frustration inherent in drawing an elegant line with what's basically a small brick. Enter Wacom's Bamboo Fun series of tablets. Reasonably priced at \$100 for a small size and \$200 for a medium, these allow you to use a pressure-sensitive pen to do delicate work. And when you're working in other applications, the pen offers quick relief for those mouse-induced wrist aches.

NOW! \$100-200, STREET.

LOCATION SENSATION

WHO? Budget-conscious shooters who want a serious strobe light that will perform equally well in the studio or on location—miles away from the nearest electrical outlet.
WHAT? JTL Mobilight 301 AC/DC monolight strobe with NiMH battery.
WHY? It's well built, bright (300 Wattseconds), and runs off wall current or an included NiMH battery that delivers up to 120 full-power pops per

TOP BUYS 2008

charge. Not enough capacity? One of JTL's numerous Mobilight accessories is a light (3 pounds!) Liion battery that promises 1,000 pops and can run multiple heads (\$750, street). Other accessories include softboxes, wireless radio and IR remote firing systems. Other features: built-in optical slave, thermostat to prevent overheating, and a clever sliding bracket that repositions the head atop a lightstand to serve as a counterbalance for heavy light modifiers such as the 36x24-inch softbox. NOW! \$330, STREET.

GREAT POD, **FOR LESS WAD**

WHO? Big-lens shooters looking for means of support. WHAT? Adorama Flashpoint F-2560 carbonfiber monopod. WHY? You'd think carbon fiber were gold, given the price of most tripods and monopods made from the stuff. But demand is high because carbon fiber is light. and, unlike metal, does not conduct heat and helps damp vibrations. Adorama's monopod gives you a sturdy leg without a leg-breaker price. The four-section pod extends to 55 inches, and folds down to just under 19 inches. It uses twist locks, comes with both 1/2-and 3/8-inch camera mounting screws, and can support up to 11 pounds. And it weighs just 10 ounces. NOW! \$90, DIRECT.

SPACE-SAVING PRINTER

WHO? People who want to print and scan photos at home, but don't have a lot of desk space. WHAT? Epson Stylus Photo RX595. WHY? Here at Pop Photo, we've got plenty of desk space for big printers and scanners, but when we adjourn to our small apartments or cluttered houses at the end of the day, we appreciate the compact nature of an all-in-one, such as Epson's Stylus Photo RX595. Six individual ink cartridges serve up Epson's dye-based Claria Hi-Definition ink. Memory card slots accommodate any kind of card your camera might use and let you print without turning on your computer. A 2.5-inch color LCD and a handy set of controls on the front let you tweak your photos before printing. NOW! \$130, STREET.

A MONITOR MONITOR

WHO? The one gnashing your teeth because the prints coming out of that fancy-shmancy printer look nothing like what's on the computer screen. WHAT? The Pantone Huey colorimeter. WHY? If you do any printing-or if you just want to share photos that look their best-this may be the best \$80 you can spend. The Huey reads and analyzes the colors on your monitor (flat-screen or tube), enabling the included software to calibrate the screen for more accurate color. The device can also measure ambient light to adapt your monitor for changing room light. NOW! \$80. STREET.

SHOESTRING QUARTET

WHO? The second-lens buyer going long. WHAT? Bargain 55-200mm zooms. WHY? Two camera makers and two independents have seriously shaved the cost of these basic lenses, which work out to an 82.5-300mm 35mm equivalent on APS-C digital SLRs and 110-400mm on Four Thirds system cameras. We tested the Sigma and it showed Very Good to Excellent SQF numbers. as well as a good showing in distortion and falloff tests.

The front filter rings of these lenses turn during focusing, which can drive you batty if you're using a polarizer. And not one is image-stabilized. But, hey, you get a sharp, wellmade, light lens for little.

WHAT'S HOT

- ■Bargain price with kit lenses.
- ■Excellent image quality, ISO
- 100-800. ■Wide dynamic range.
- ■In-body image stabilization
- works with any lens.

WHAT'S NOT

- ■Low noise comes at the expense of resolution.
- ■Button placement could've been better.
- ■No live view in the LCD.

WHO'S THIS FOR?

■First-time DSLR buyers looking for low-cost entry into Sony's Alpha system. ■Budget body-hunters who want to use their Konica Minolta lenses.

By Philip Ryan

A little dough and a lot of sugar

When Sony introduced its

first DSLR, the Alpha 100, we liked it enough to name it our 2006 Camera of the Year. While its replacement, the new Alpha 200, doesn't break much new ground, it will certainly give its entry-level competitors a run for their money. And money is the operative word, given the A200's bargain street price of \$500 with a 18-70mm f/3.5-5.6 lens (\$700 with additional 75-300mm f/4.5-5.6 lens).

As we mentioned in our first look at the A200 (March 2008). the new camera has the same 10.2MP (effective) CCD sensor as its predecessor, placing it on par with other entry-level DSLRs in terms of pixel count. Like all cameras in this class (except for those made by Olympus, with the Four Thirds system), it has an APS-C sized sensor, which in this case gives it a 1.5X lens factor. Sensor-based image stabilization is built right in. Where the Alpha 200 outstrips most: sensitivity, which reaches ISO 3200. That's not only 1 stop more than the A100, but 1 stop more than the Canon EOS Rebel XS and XSi. Olympus E-420, and Pentax K200D.

The real question: How well does the Alpha 200 perform? Very well indeed in our tests both in the Pop Photo Lab and in the field.

Overall, image quality was Excellent from ISO 100 through 800.

■ IMAGE QUALITY: This shot of a pond shows ample detail in the murky water, plus nice colors in the lily pads. Multisegment metering wouldn't have blown the highlights, but we used centerweighted metering to expose for the shadows.

It slipped to Extremely High at ISO 1600-3200, when noise reduction, a default setting, kicked in at the expense of resolution. This dropped to 1725 lines at ISO 3200 from 2150 lines on average at lower ISOs.

The A200 also fared very well in our noise tests, slightly edging out Canon's Rebel XSi from ISO 100 through 800. But even at lower

Studying Photography at Home Never Made More Sense Than It Does Today

Save time and money while you learn from the professionals at NYI.

NYI's great teachers and course offerings guarantee you can learn what you need to know in the comfort of your own home, whether you're interested in photography as a career or just want to take great photographs.

Master your skills and train for a new full- or part-time career with the professionals at NYI. You'll be assigned your own student advisor and your own tutor—both of whom will be professional photographers in the heart of the world's media capital—New York City!

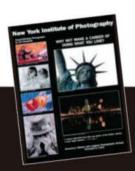

And, you won't spend a penny on gas, waste a moment in traffic, or stand in line at the airport. Your home is your classroom of one, but you never need to go it alone with help from NYI's staff and faculty. We make learning fun!

Send for our catalog for the latest edition of the Complete Course in Professional Photography. If you're interested in our Short Course: Fundamentals of Digital Photography or our Adobe® Photoshop® for Photographers course, visit us online to learn more about those programs.

SONY ALPHA 200

sensitivities, its noise advantage costs the Sony resolution: The Canon beats it by about 100 lines at ISO 100.

And color accuracy scored an Excellent rating in our Lab test, with an average Delta E of 7.6-more accurate than any consumer-grade film. Sony's Dynamic Range Optimizer does a good job of producing images with a wide range of tones from light to dark. Images also show excellent contrast.

Sony's 40-segment honeycombpattern metering system determines the right exposure for a given scene, and it's supplemented by both centerweightedand spotmetering for trickier conditions. While its multisegment metering doesn't guite measure up to Nikon's nearly telepathic 3D Color Matrix Metering II in adapting to extraordinary situations, such as a heavily backlit portrait, we're still plenty impressed. We're also glad that Sony's multisegment metering errs on the side of preserving highlights, since it's easier to resurrect shadow detail

Burst shooting came close to matching Sony's claim of 3 frames per second in our tests. A camera's actual burst rate in the field depends on a number of factors. sometimes including which memory card you use. We were able to get 25 images in 9 seconds, for an average of 2.8 frames per second using a Lexar 2GB UDMA 300X-speed card. Conveniently, you can shoot JPEGs continuously until your card fills up, though you're limited to 6 RAW images, or 3 RAW + JPEG frames, before the buffer runs out of space.

Focus on convenience

Timi

SOM

3.5-5.6/18-70

The Alpha 200's 9-point autofocus system proved speedy in our Lab tests, especially in very bright light. It was faster than the Canon Rebel XSi and Nikon D60 in bright conditions, though slower than both of them as the light dimmed. Compared with the Pentax K200D and midlevel Olympus E-520, the

> Sony was faster across all levels of brightness. At EV 10 and 12, the brightest light in our test. the A200 was able to lock focus in a scant 0.27 second. In very dim light, it slowed but still managed a respectable 1.4 seconds at EV -1. a little brighter than the light of a full moon, which was the darkest light level the AF system could take. That's common in this class of DSLR. Canon's Rebel XSi can

VIEWFINDER TEST

Accuracy: 95% (Excellent)
Magnification: 0.89X (Very Good)

reach down to EV –2, but the Nikon D60 joins the A200 in bottoming out at EV –1. The Pentax K200D can reach EV –1, but not reliably, while the Olympus E-520 didn't autofocus below EV 0 in our tests.

A pair of sensors just below the optical viewfinder trigger the Eye-Start AF function. As the name indicates, the camera will begin to focus as soon as you raise it to your eye. However,

SONY ALPHA 200

since the Alpha 200 can't distinguish between your eye and your chest, you may want to dig into the custom menu to turn off this function if you wear your camera around your neck.

Also, as indicated by the 0.89X viewfinder magnification we measured in the Pop Photo Lab, the A200 suffers from only minimal tunnel vision. If you wear eyeglasses, though, you may have trouble seeing info at the bottom of the finder and a full view of the frame at the same time. Thankfully, when we tested the finder, it served up a very impressive 95-percent accuracy.

That's crucial, since you won't find live view on the Alpha 200, so if you want that, you'll have to step up to the otherwise nearly identical Alpha 300 (\$600, street, with the same lens).

A host of other features make shooting more convenient, though. For instance, to let you tailor color settings to your subject, Sony's main menu offers what it calls Creative Style settings. Standard is good for general shooting; Vivid boosts saturation; Landscape boosts saturation, contrast, and sharpness; Night View rolls back contrast to accommodate for the wide dynamic range of night-time scenes; Sunset accentuates the red of sunsets; and B&W creates monotone images. Creative Style is also where you can choose the Adobe RGB color space, which offers a wider gamut of colors than the sRGB color space used by all the other styles. You can also adjust contrast, saturation, and sharpness.

Another nice touch? The filter in front of the sensor has an antistatic coating, and the entire sensor assembly vibrates when you turn the camera off to shake away any dust that may have landed on it.

Get a grip

You have to hand it to Sony's design team: The A200's revamped body design has curves in all the right places. Starting with the reasonably long grip, Sony creates an undulating set of swoops that make it effortless to achieve a firm hold. Around back, an odd ridge bends to the left and creates a curve toward the top, providing an awesome resting place for your thumb.

While we applaud the inclusion of dedicated buttons for ISO and drive mode atop the camera, the drive button

is too far to the left to reach comfortably while shooting. Excessive leftward placement also plagues the exposurecompensation button, which, along with the exposure lock button, is too far recessed for our taste.

This would be less of a problem if Sony included a rear control wheel. Instead. to change aperture in manual-exposure mode, you have to hold down the exposure-comp button while turning the wheel next to the shutter.

That wheel provides well-defined clicks for feedback as you rotate it, but one with a larger diameter and slightly lesscoarse surface would have been a better choice. The mode dial, which has a nicely knurled edge, gives quick access to six scene modes that DSLR newbies should find useful.

In keeping with the trend in entrylevel DSLRs, you have to jump into the Function menu to change the most commonly used settings. The type is pleasingly large on the 2.7-inch LCD screen, and it's fairly quick to control the camera while out in the field.

And we really like that there's a

■NIKON D60 with

18-55mm f/3.5-5.6G VR lens (\$630, street) Priced \$130 higher than the A200, and with a shorter zoom on its kit lens, Nikon's entry-level DSLR is a tough sell. If you like the visual feedback of lens-based image stabilization, then Nikon has an edge there. But Sony's sensor-shift IS is compatible with any lens you put on the camera. Both cameras showed similar color accuracy and AF speed in our Lab tests, with Sony producing slightly more resolution at lower ISOs (2150 vs. 2050 lines). The Sony's 9-point AF system gives it a bit more coverage in the frame. **■CANON EOS REBEL XS with**

18-55mm f/3.5-5.6 IS EF-S lens (\$700, est. street) While we haven't tested this just-announced DSLR yet (see the Hands On in this issue), it is very similar to its predecessor, the Rebel XTi. If we can expect even slight improvements over that model, then it should match or surpass the A200 in image quality and performance. But Sony's sensor-shift IS should appeal more to budget shooters, given Canon's optical IS design, which is tied to specific lenses (as Nikon's is). While the Sony has 9 AF points, the Canon's 7-point system covers a wider range across the middle of the frame.

physical switch for the sensor-shifting Super SteadyShot image stabilization.

If you want to take full advantage of an accessory flash, such as Sony's new HVL-F58AM, the Alpha 200 includes a wireless flash mode. This doesn't offer the same level of control as you'd get if you use the F58AM as the master wireless unit, with which you can adjust the lighting ratios of slave units. Still, it's better than having no wireless control-a drawback of entry-level Nikon and all Canon DSLRs.

Sure, the selection of Sony-branded

lenses and accessories isn't quite as large as those from Canon and Nikon. But the company continues to add more and more lenses, and third-party lens makers have been bolstering their offerings as Sony sells more bodies to the DSLRhungry masses. Of course, there are still plenty of older Konica Minolta-mount lenses that fit Sony bodies, too.

All in all, Sony's Alpha 200 is a capable bargain-priced DSLR. Once you consider that the kit comes with a longer-thanusual 18-70mm f/3.5-5.6 lens for only \$500, it becomes a steal.

Internal Affairs

You'll love what's inside

Not even a year after it introduced its first full-frame DSLR, the

D3, Nikon is at it again. The latest: the

bodied, midlevel model (\$3,000, street, body only; \$3,600 with 24–120mm f/3.5–5.6G IF-ED VR II Nikkor lens). And get ready, Nikonians, because it carries over most of the groundbreaking features that made the D3 such an imaging powerhouse.

12.1-megapixel D700, a smaller-

In Nikon's line, the D700 falls squarely below the D3 (\$4,820, street, body only) and above the D300 (\$1,650, street, body only). Canon's midlevel full-frame DSLR, the EOS 5D

By Philip Ryan

(\$2,200, street, body only), matches the D700 in terms of pixel count, but doesn't live up to the D700's high sensitivity, 14-bit RAW files, or other innovations since the 5D launched about three years ago. Plus, unlike the Canon, the Nikon has a pop-up flash.

The D700 uses the same full-frame CMOS sensor as the D3. It also covers the same 200–6400 ISO range (extendable to the equivalent of 100–25,600), as well as the same 51-point (15 cross-type) autofocus system and 1005-pixel 3D Color Matrix Metering II. For image playback and menu surfing, there's a big, 3-inch, 920,000-dot LCD.

Like its bulkier and pricier sibling, the D700 includes two live-view modes. One is for handheld shooting and the other for use on a tripod. Nikon also carried over the D3's virtual horizon indicator, which can now be used as an overlay on top of the image you're framing when shooting in live view.

The similarities don't end there.
The D700 includes Nikon's EXPEED processing with 14-bit A/D conversion and 16-bit internal image processing. You can apply D-Lighting in-camera tweaks in three levels, though the D700 adds an auto setting. The pop-up flash includes Commander mode for wireless control of Nikon accessory flashes. The AF fine-tune custom function lets you adjust specific lenses to make them focus slightly ahead or behind their normal point of focus—you can program up to 20 lenses into the camera, or set a universal adjustment to apply to any lens.

Like both the D300 and D3, the D700 includes Nikon's Scene Recognition system, which uses the metering sensor to figure out what kind of scene you're shooting, then helps set white balance and exposure. But the D700 takes things one step further by offering face detection: In Auto-area AF mode, the camera can find a face and use it

NEW & NOTEWORTHY

■Nikon's first full-frame midlevel DSLR. ■Sensitivity up to an equivalent of ISO 25,600.
■51-point AF system with 15 crosstype sensors. ■Scene Recognition with face detection.

CONSIDER THIS IF. . .

You want a full-frame Nikon at a relatively reasonable price, or if you crave astronomical sensitivity in a midlevel DSLR.

HANDS ON NIKON D700

to set various shooting parameters; in continuous AF mode, it helps track subjects moving through the frame.

The magnesium-alloy body is just slightly larger than the D300, due to the larger sensor, but it has a similar layout and weathersealing. You'll find all the familiar Nikon touches, such as the quality, white balance, and ISO buttons atop the drive-control wheel. It also has Nikon's signature sculpted grip, with a nice indentation on the inside, giving a

solid feel when pivoting the camera or shooting at an odd angle.

Given that the D700 costs much less than the D3, you might wonder what it lacks. The most tangible loss: the vertical grip. For an extra \$240 (street), you can add the same MB-D10 battery grip that fits the D300.

Adding the grip will get you the same kind of continuous-shooting advantage. In this case, it boosts the burst rate to 8 frames per second from 5 fps. You can shoot JPEGs until your CF card is full, or capture 23 12-bit NEF RAW, or 20 14-bit

NEF RAW files before the buffer fills up.

Other differences make sense, considering its position in Nikon's product line. For instance, the D700's shutter is only rated for up to 150,000 cycles. While not shabby, it doesn't equal the D3's 300,000-cycle shutter.

The D700's viewfinder gives you 95-percent coverage and a 0.72X magnification, in line with the Canon EOS 5D, which provides 0.71X magnification. Canon's EOS-1Ds Mark III has the best magnification, 0.76X, of any full-frame DSLR right now; the Nikon D3's is 0.70X.

All this may have you reaching for your credit card. But there is a drawback that comes with Nikon's shift to full-frame. Namely, megapixels. The D700 steps down to 5MP if you use it with 1.5X lens-factor DX-format glass.

When Nikon first announced the full-frame FX format with the D3, there was surprisingly little negative pushback about the DX lens issue. This may be because most D3 users are pros who can afford to write off new lenses as a business expense (or were using their old lenses from film days).

But with a wider potential market for the D700, it'll be interesting to see how many Nikonians complain about having to buy new lenses. (Of course, you can't even mount Canon's sub-full-frame EF-S lenses on EOS-1D or -1Ds bodies, either, so take comfort, Nikonians.)

This year and next will surely see the DSLR wars intensify as Canon, Nikon, Sony, and possibly Pentax and Samsung get into the full-frame competition. Nikon is off to a good start, but will likely meet with some intense counterstrikes soon. With the EOS 5D at 12.8MP, it's likely that Canon will raise resolution in the next iteration of that model. Also, Sony's upcoming 24MP DSLR (like the D700, lacking an integrated vertical grip) will probably be targeted at a similar price range. We expect to see the D700 surpassed in resolution by the end of this year.

Still, the D700 will no doubt find a home with many wedding photographers and Nikon enthusiasts. It may even entice some photographers who use other brands to switch. If the performance we've seen from the D3 indicates anything, this should be one amazing camera. Check www. PopPhoto.com for Certified Test Results from the Pop Photo Lab. We'll post them as soon as we have a testable D700.

"Sparks Lane" © 2007 Tony Sweet. This image was scanned from 35mm film with the Microtek ArtixScan M1 Pro.

Tony Sweet, Photographer © 2006 Susan Milestone

Nature photography is one of the most demanding subjects when it comes to composition. Good composition distinguishes an outstanding nature photograph from a tourist snapshot. To illustrate this point, look at the photograph above taken by Tony Sweet. Tony is a professional nature photographer. When you see his collection of nature photographs, you clearly see how good composition grabs your attention. To see more of Tony's photographs go online to www.tonysweet.com.

One of Tony's passions is panoramic pictures that he captures on 35mm film with his Hasselblad XPan® camera. Like many photographers, Tony needs these images in digital form and he uses Microtek scanners to scan his film. The image above was scanned with the Microtek ArtixScan M1 Pro which is designed for high-quality film scanning. We are proud to featureTony as one of the many professional photographers using Microtek scanners.

A Lighting System That's Out of This World

Photography is all about problem solving, and the more tools that you have at your disposal, the more problems you will be able to solve efficiently. That is the premise behind the Calumet Travelite flash system. This comprehensive lighting system begins with two self-contained monolights, a 375w/s unit and a 750w/s unit.

What makes the Travelite system so special is its vast selection of dedicated accessories. Whether you're shooting portraits or products, you'll appreciate the range of reflectors that allow you to go from high-key to super-soft in one simple motion. Changing the angle and direction of light is equally easy with a variety of grids, snoots and barn doors. These light modifiers are also compatible with Calumet studio flash systems and Bowens flash systems. For unlimited flash possibilities, a rechargeable Travel-Pak is available that allows up to 300 full-power flashes from a single charge.

Travelites are sold separately or in convenient, money-saving kits that include all you need to get started taking professional-quality flash photographs. Travelite kits are also available "for rent" at reasonable daily and weekly rates from each of our retail locations. Call or visit our website for details.

SLIK Super A. M. T. alloy uses a mixture of Aluminum, Magnesium and Titanium to form an alloy stronger than regular aluminum yet much more light-weight.

For professionals, the PRO 700 DX is a sturdy tripod that will hold up to years of regular use. The PRO 500 DX is a slightly smaller and lighter version with the same features.

For enthusiasts, the PRO 330 DX and PRO 340 DX are compact and light-weight for easy use and easy traveling.

The little DSLR with big expectations

Boomer

What do you give up if you

buy a "starter" DSLR? Not much, with the new Canon EOS Rebel XS. A replacement for the Rebel XTi, the Rebel XS (\$600, estimated street, body only; \$700 with kit lens) isn't a major technological upgrade, and it keeps its predecessor's 10.1MP CMOS sensor. But Canon's most affordable DSLR catches up to current trends: It comes with image

stabilization, thanks to the EF-S 18-55mm f/3.5-5.6 IS kit lens, as well as live view on the LCD to ease

the move from a digital compact.

What else? DIGIC III processing should help keep noise down, performance up, and overall image quality high. And the reins are off burst shooting: You can capture as many JPEGs as will fit on your SD card at up to 3 frames per second.

But bursts take a hit with RAW files, dropping to 1.5 fps, with the same 6shot maximum of the XTi. We think this

By Philip Ryan

is due to the memory constraints that Canon says limit image processing to 12 bits per second, versus the 14 bits of pricier models—you won't find Canon's Highlight Tone Priority mode here.

There are a few other compromises compared with its sibling, the 12.2MP EOS Rebel XSi (\$800, street, body only; \$900 with the same kit lens), which won our step-up DSLR shootout last month ("Midlevel Marvels," August 2008). The XS has fewer autofocus points, a total of 7, instead of the 9-point diamond-pattern system of both the XSi and the XTi. This new system covers a wider pattern, so it might provide an advantage for tracking across the frame, though you'll lose some coverage with subjects positioned toward the corners. The center point is a cross sensor, but not a high-precision type.

Besides the extra megapixels and AF points, the XSi retains its edge with a nicer viewfinder and slightly larger 3-inch LCD; the screen in the new XS is only 2.5 inches. And the XSi sports a viewfinder magnification of 87 percent—even higher in our test results—versus 81 percent on the Rebel XS. If you like to use a remote trigger, you should note that the XS will accept only a wired remote, while the XSi can use either wired or wireless.

What you will find on both models is the same rechargeable LP-E5 lithium ion battery, which has a CIPA rating of about 500 shots per charge, significantly more than the 360 shots with the Rebel XTi.

Also like the XSi, the new Reb has two kinds of AF in live view. The contrast-based version works without blacking out the viewfinder, but it's slower than the phase-detection type, which has to flip up the mirror and block the live view while focusing. Neither of these two is as smooth as the one in Sony's Alpha 350, which employs a second sensor to give you uninterrupted live view while focusing.

All told, while the Rebel XS is a minor upgrade from the XTi in terms of technology, the improvements bring it close enough to the XSi to keep it near the front of the entry-level DSLR pack.

NEW & NOTEWORTHY

- ■Live-view shooting.
- ■7-point AF system.
- ■DIGIC III processing.
- ■Image-stabilized 18–55mm kit lens.

CONSIDER THIS IF. . .

You're looking for an inexpensive DSLR and want to buy into the vast Canon EOS system.

For filters as good as the finest lenses, use only B+W. Even the highest-resolution CCDs For richer, more saturated colors and sharpest lenses are only as good and reflection control, B+W polarizers are unsurpassed...and as the filters you use. German-made B+W filters are diamond-cut from for protecting your lens without compromising the image, our UV clear optical glass, precision ground, polished and tested to perfection. filters are clearly superior. We even Our two-sided Standard Coating offer Slim Line filters that eliminate or optional Multi Resistant Coating vignetting with wide-angle lenses. (MRC) suppresses lens flare and Achieve exceptional in-camera increases light transmission. B+W images by using the world's filters offer image control solutions best filters. with the optical quality that helps capture absolutely stunning images in camera, eliminating the drudgery of computer retouching. WHICH ONE

Which Ultracompact Should I Buy? PowerShot SD870 IS (

I want a digital camera that's so compact I can take it everywhere. What's the

smallest full-featured digital camera around?

"Small" and "full-featured"

aren't mutually exclusive terms, though when you gain portability you can lose firepower.

For instance, Canon's 8MP

PowerShot SD870 IS (\$260, street), Fujifilm's 12MP FinePix F100fd (\$330, street), and the 10MP Nikon Coolpix S600 (\$250, street) are all slip-in-your-pocket small. All have zoom lenses that begin at the wide-angle equivalent of 28mm and extend 3.8X, 5X, and

Participate in our online surveys and BE ELIGIBLE TO WIN PRIZES FOR EACH SURVEY YOU TAKE.

WE'RE INVITING YOU TO SIGN-UP TODAY at www.popphoto.com/sweepstakes to

participate in our online surveys and for a chance to WIN BIG in the *Dream Come True Sweepstakes*.

When you enter, you'll be eligible to win one of over 1,000 incredible prizes including:

FIRST PRIZE: Digital Camcorder • a \$2,000 value! SECOND PRIZE: Nikon® D80 Digital Camera

a \$1,000 value!

THIRD PRIZES: Samsung® DVD Player

a \$100 value! (50 prizes)

FOURTH PRIZES: Helbros Dress Watch

• a \$64 value! (1,000 prizes)

or the GRAND PRIZE: Your choice of a

CARIBBEAN CRUISE FOR 4 or \$25,000 in CASH! No purchase is necessary, but hurry – you need to be entered to win!

For official rules and details, visit: www.popphoto.com/sweepstakes

NO PURCHASE NECESSARY TO ENTER. Sweepstakes begins 10/15/07 ends 1/30/08. Sweepstakes open to legal United States and Canadian residents and to residents of other countries and U.S. terribries and possessions only where offered and permitted by law. Vold where prohibited by law. For a copy of the official rules, which govern this Sweepstakes, visit www.pophoto.com/sweepstakes or write to: "Dream Come Time Sweepstakes" Official rules, ob Ventura Associaties Inc. Castomer Service, 1040 6th Ave. NY. NY 10015 and may be presented in different creative presentations by different organizations (in "Plesenting Promotolists").

Photography
Reader Survey Panel

4X, respectively. While features such as image stabilization and high-quality video are common in this class, try finding shooting modes for serious photographers, such as aperture priority, shutter priority, or manual exposure. None of these three have them.

Nor are those features included on such up-market, titaniumskinned compacts as the 12.1MP Canon PowerShot SD950 IS (\$341, street) and Sony's 13.6MP Cybershot DSC-W300 (\$350, street). And at more than 1 inch thick, they're chunkier (by tenths of an inch) than any others mentioned here.

For trimming cubic millimeters off their specs, the Canon PowerShot SD770 IS (\$260, street) and Casio EXILIM EX-S10

■ SMALL ORDER: The Fujifilm FinePix F50fd has face detection, 35–105mm (equivalent) lens, control beyond the Auto mode, and a low price (\$210, street).

(\$210, street) are champs. They're downright tiny 10MP cameras. For example, the Casio weighs only 4 ounces (without battery). But, not surprisingly, their feature sets are fairly bland.

A good compromise? The Fujifilm FinePix F50fd (\$210, street). This 12MP, 3X-zoom camera measures 3.6x2.3x0.9 inches and tips the scale at 5.4 ounces (without battery). It gives you Face Detection (up to 10 faces), automatic redeve removal, sensor-shift image stabilization, two preset scene positions that let you directly dial up the shooting mode of your choice, a 5-frameper-second burst rate, fast start-up time, and exceptional build quality. Unlike some Fujifilm cameras, the F50fd accepts SD and SDHC memory cards, as well as xD. Also expect impressive low-light performance and virtually noise-free available-light shooting up to ISO 400-along with surprisingly good performance at ISO 800 and above.

And, this Fuji has aperturepriority and shutter-priority exposure modes so you don't have to sacrifice control for compactness.

—Jon Sienkiewicz 🛇

 Picture shooting on slippery surfaces, such as marble or ice, and from moving vehicles.

vertical and horizontal

Monostat-RS monopods are available in aluminum and high tech 6X carbon fiber. They extend to maximum heights and retract to be highly transportable. The 3/8, ¼" reversible camera mount allows for the convenient attachment of most types of cameras.

The mission of Popular Photography's Checkrated Program is to give our readers the confidence they need to purchase merchandise from our Mail Order advertisers on the following pages, each of whom has agreed to abide by our guidelines listed below.

GUIDELINES FOR OUR ADVERTISERS:

- 1. All advertisements must be truthful and not misleading.
- 2. Must honor all advertised prices.
- Must ship all merchandise as packaged by the manufacturers.
- No substitutions can be made without the purchaser's consent.
- Must specify if the product has a U.S. warranty from the manufacturer or has a store or third party warranty.
- 6. The invoice price must match the advertised price or the price agreed to at the time of purchase.
- Ads for lenses must specify whether prices are for all mounts or only specific mounts.
- Undisclosed tie-in sales where an item will be sold at the advertised price only if additional items are purchased are forbidden.

If you have difficulties with any Checkrated advertiser and are unable to solve them with the dealer, feel free to write us:

for Adobe Photoshop

By Harold Martin

25 YEARS AGO SEPTEMBER 1983

1. Eye contact:

This dramatic cover picture was made by Jan Cobb on assignment for Borghese cosmetics. He used a 35mm SLR with a 105mm lens.

plus a warming filter. Lighting was from three electronic flash units—two for the background to create the silhouette effect, and a third with focusing spot for the face.

2. Goldsmith on wordsmith:

During the '30s and '40s, the most influential writer on photography was Jacob Deschin, whose column in the *New York Times* was "must" reading for anyone interested in the world of cameras. He also wrote for magazines, including the very first (May 1937) issue of Popular Photography. This well-deserved tribute was written by Editorial Director Arthur Goldsmith.

3. Above it all: Ruth Orkin, one of the major photographers of the mid-20th century, lived in an apartment across from New York City's Central Park. The changing

seasons and the passing parade of humanity provided inexhaustible subject matter for her to photograph from her window. This lovely winter scene was taken in 1981 with a 35mm Nikon SLR.

4. Casual chic: As part of a feature on the virtues of "clamshell" 35mm cameras—ultracompact folding models which would be enclosed to fit into a pocket—photographer Robert Grodman made this casual, available-light, candid shot in a Paris café. He used a Chinon Bellami camera and Kodak Tri-X film.

1930 1940 1950 1960 1970 1980 1990 2000

50 YEARS AGO SEPTEMBER 1958

1. Screen goddess:

Stefanie Griffin was emerging from a pool in the Mojave Desert when she was photographed by Jon Abbot of New York City. He used a Hasselblad 1000F with an 80mm Tessar f/2.8 lens and Kodacolor film. Exposure was 1/50 sec at f/8 through an 85C filter, used for maximum color fidelity.

2. Viva la revolución: Freelancer Andrew St. George covered the revolution in Cuba, starting as a writer with a camera. His pictures of Fidel Castro and his army turned St. George into a pro photographer. This photo of Castro was published 120 times. St. George used a 2½x3½-inch Plaubel Makina IIIR camera with 100mm Anticomar f/2.9 lens and 120 Verichrome Pan film.

3. Reader portfolio: Among the photos included in this month's Amateur's Workshop section was this appealing shot made by Yvette Ripplinger of New York City. She took the picture while she was on assignment with a U.N. technical

assistance mission in Africa, using a Kodak 35 camera, Kodak Plus-X film, and an exposure of 1/25 sec at f/4.5.

4. Upside-down camera: In addition to pictures, Amateur's Workshop included useful tips such as this one for adding versatility to a press camera. The article explained that while all cameras permitted lens rise, only view cameras provided for lens fall. So by mounting a press camera upside-down using an extra top-mounted tripod socket, the lens of a press camera could be lowered to

extend the range of image control.

Why Filters for Digital Cameras? With sophisticated image editing tools like PhotoShop & PHOTO-PAINT, why bother with optical filters? Given enough time, talent and patience, you probably could emulate most filter effects in postprocessing, but when would you find time to shoot, eat & sleep?

· EM-140 DG Fully dedicated with Canon E-TTL I or Nikon i-TTL/D-TTL Available for Canon. Nikon & Sigma #SIEM140DG+539995

L E N S COVERS

Moving a big white (or black) lens near skittish wildlife is like waving your orms — a sure way to flush your subject and ruin what could be a oncein-a-lifetime photo apportunity. LensCoat™ Lens Covers mask your large lens, giving you a better chance at getting the shot.

Manufactured from 100% closed-cell neoprene offering protection from bumps, jars and nicks, with a camouflage-pattern fabric cover. Lens Covers also provide a thermal barrier, protecting your hands from cold lenses in lower temperatures. They are easy to install and remove, leaving no residue on the lens. And LensCoat™ lens covers are waterproof, providing protection in barsh conditions.

Available for a wide variety of lenses.

Lensbabies Want a fun little lens that

will add a creative spark to your repertoire? Lensbaby 3G Selective Focus SLR Camera Lens!

Bend • Lock • Fine Focus

Bend - Lock - Fine Focus Bring one area of your photo into sharp focus, and you can move that sweet spot of focus around the picture by bending the flexible lens tubing. You will get a unique new look, with gargeous blurring, glowing highlights, & subtle, prismatic

olor distortions, all without software manipulations.

- Focus Type: Manual/Fingerip with 2 additional types of fine focusing.

- Facal Length: around 50mm - Interchangeable levitating magnetic.

Aperture: f12, f12,8, f14, f15,6, f18, f111, f116, f122 - Min. Focus 12*

Available for most 35mm & digital SLR cameras #LB3G \$269.95

YOUR QUESTIONS ANSWERED

Gridiron gripe

I shoot local football with a Canon EOS 5D and a tele lens with 2X teleconverter. It's fine for day games, but at night the AF often has trouble with dark uniforms, and I have to focus manually. You've said Canon shooters often use f/4 teles with converters at night. Why can they autofocus and I can't? Robert Cohen Springfield, MA

Pro football fields are probably better lit than yours. Also, virtually all Canon-shooting pros use 1D-series DSLRs, which have a central AF sensor that works in much less light than your 5D. It requires optics (lens plus converter) no dimmer than f/5.6 for consistent AF. Our advice: Try a 1.4X converter. If that doesn't do it, skip the teleconverter and crop for the framing you want.

B-ball, too!

Your response to the inquiry about low-cost alternatives to f/2.8 zooms for shooting indoor basketball (August 2008) missed the obvious. A 50mm f/1.8 prime is fast and inexpensive enough (especially used), and is an appropriate focal length for hoops. Chuck Reynolds Poway, CA

That's a slam dunk, Chuck. Thanks!

Power outage

120

I have a Nikon Coolpix 3100 and would like to know if I can use

a third-party CR-V3 lithium ion battery in it. Kunio Matsumoto São Paulo, Brazil

If websites that sell replacement CR-V3s are correct, the answer is yes. Calcellular.com, for example, recommends its CS-Power brand CR-V3 batteries (\$8, direct) for the 3100 Coolpix. If there's a problem, it could void the warranty, but your 3100 is almost certainly out of warranty anyway. You have another, more widely available power option: rechargeable AA NiMH cells.

Date line

My family has been using a digital camera for a while, but we really miss one of the functions that our film camera had: date stamps on the photos. Do any newer digital pointand-shoot cameras offer it?

> William Cheng Via e-mail

Sure. Many mid- and high-end digital compacts offer time/date stamps, but not necessarily at all resolutions. For instance, the Canon PowerShot SD770 IS Digital ELPH (\$240, street) provides it, but only at the 1600x1200 midlevel resolution. The Fujifilm FinePix S8100fd (\$340, street) offers it at all resolutions, as do many Kodak, Nikon, and Pentax mid- and highend digital compacts. Before buying, check the specifications on the manufacturer's website. If you want to know when a specific photo was

taken, you can always check the image file's metadata (also called file info) in almost any image editor.

Warmly yours

I created an action in Adobe
Photoshop to warm up skin tones,
and I use it for almost all my portrait
subjects. Is there an easy way to do
this in the camera through custom
white balance?

Anita Riggs
Brooklyn, NY

Try Warm Cards (www.warmcards, com). In varying shades of blue/ green, the cards are custom white-balance targets that give you small or large warm shifts. Unlike your Photoshop action, which will introduce the same shift for all skin tones and ambient color temps, Warm Cards let you adjust the degree of warmth to suit the situation. They come in sets of eight targets (with two cooling and a neutral 18-percent gray card), plus a carrying case, for \$45 (direct).

Crop knot

My Panasonic Lumix DMC-TZ3 gives me the option of taking photos using a 4:3 ratio, a 16:9 ratio, and a 3:2 ratio. To capture the entire scene, I have it set to 4:3, assuming that the other two ratios are crops into the 4:3. Is that correct? Or does the camera capture 16:9 and crop into that for 4:3?

Bob Garmise Westerville, OH

Since the 4:3 aspect ratio has the greatest pixel dimension, according to the camera's specs, that will give you the largest image area available for the TZ3.

CORRECTION

In a Tech Support explanation of the archival characteristics of plastic print sleeves (June 2008), we should have said PVC plastic sleeves could *stick* to prints, not *fade* them.

Got a question? E-mail us at PopEditor@ hfmus.com (including your name and street address) or visit the Tech Support forum at www.PopPhoto.com.

Carbon Fiber Tripods

ALL THE FEATURES OF A HIGH-PRICED CARBON FIBER TRIPOD WITHOUT THE HIGH PRICE

Carbon fiber is much stronger than aluminum yet it is about 30% lighter in weight than aluminum. It absorbs shock and does not transmit vibrations; that ensures sharper images and the built-in bubble level helps you get it straight.

Flashpoint tripods feature European styling. They open and close with ease and have leg locks that really lock solid. Legs are multi-positionable and with the low center column, the tripods can be used for low, ground-level photography. Leg ends are rubber tipped and have retractable spikes.

BALL HEADS: Made of magnesium alloy. stronger and less weight than standard aluminum ball heads.

MONOPOD: Super tough - super lightweight.

ADGRAMA

WAYS TO

BY CANDY CUENCO

Getting dust on the filter covering your camera's sensor is inevitable, even if you rarely change lenses. There's almost as much conflicting advice about how to remove dirt from the sensor as there are products to do the job. Here are the three main approaches, along with a couple of affordable products to keep it clean:

Send the camera to a pro. This is your safest bet. If you send your DSLR to the manufacturer or a repair shop for cleaning, you're in the clear if something gets damaged. Take it into your own hands and mess up? You void the warranty. Of course, sending it out can be costly (\$50 or more), and you'll have to live without your camera for a few days or weeks.

Blow it off. Proponents of the canned air method often use Falcon Safety Products' Dust-Off (\$14, direct; www. falconsafety.com) to blow off the dust. The key when using any type of blower is to use dry, compressed air at a very low pressure (max. 20 psi). We suggest using a blower brush, with the brush tip removed, to avoid too strong a burst of air.

Wipe it off. There are plenty of sensor-swab products, so it's just a matter of finding the one you are most comfortable with. Dust-Aid (www.dust-aid.com) makes low-cost wet and dry wands, as well as cloth wipes. These methods are best for persistent spots and smudges.

EXPERT TIPS

COMPILED BY KATHLEEN DAVIS

BRING ON THE NOISE

While most photographers see digital noise as a bad thing, there are times when intentionally including some can work. To achieve these effects, you'll need to use noise reduction software on a portion of your image. Here are examples of "good" noise:

- Exposing for the rich colors in a sunset will likely give you some noise, but leaving it in the entire scene except for the disc of the sun itself will create visual impact.
- The long exposure necessary to capture star trails will give you a noisy image. You might need to keep the noise in the sky to achieve crisp star trails, but try eliminating it from the foreground elements.

ADAPTED FROM PRACTICAL ARTISTRY: LIGHT & EXPOSURE FOR DIGITAL PHOTOGRAPHERS BY HAROLD DAVIS (O'REILLY, 2008; \$30)

CHILD'S PLAY

They grow up too fast, so why waste time on bad photos of your kids? Many of these tips will come in handy with older subjects, too.

- Focus on feeling. The main difference between a snapshot and a portrait is thoughtful composition, and the most important part of a compelling composition is emotion. (Kids don't hide much.) Think about what part of the child's personality you want to convey, or what larger message or story you're telling.
- Keep it simple. Show only what tells the story and nothing else. This often means getting really close—don't be afraid to photograph only parts of your subject (such as a newborn's toes or wrinkles).
- Use negative space. Placing a child slightly off-center in a larger background of color, for example, ensures a clean composition and leads the eve right to your subject. •

SPEAKING OF PHOTOGRAPHY

COMPILED BY MATTHEW HOLDEN LEWIS

)U()TFS

"To me, to make a picture is a necessity. The reason I'm making pictures is out of a necessity to order the world. which is really ordering myself." **AARON SISKIND**

"Straight photography, tight as sonnet-form, is all the scope I need...Photography is the transforming act of the photographer—as a caterpillar eats green leaves and is changed into a butterfly-his body is turned into a body of photographs—the corpus." MINOR WHITE

"When beginning photographers ask me for advice. I tell them to photograph their own backyard. If your pictures can tell that story clearly, honestly and beautifully, then you're ready to go out into the world."

DAVID ALAN HARVEY

"The best way to observe fish is to become a fish." JACQUES-YVES COUSTEAU

"One good large picture that can be framed and hung up in a room is worth a hundred little bits pasted in a scrap book." SAMUEL BOURNE

"I see my finished platinum print on the ground glass in all its desired qualities, before my exposure."

EDWARD WESTON O

"This was at a friend of mine's house [in Saskatoon, Saskatchewan, Canada]—he lives in one of those buildings. I'd thought about taking that picture for a long time before I actually did it. I really wanted to go wide-angle, but I didn't have the right lens. That day, I really liked the light and how ominous it looked, and I had a borrowed Olympus E-3 with a 12–60mm f/2.8–4 Olympus Zuiko lens. I canted the angle by getting down to about knee-level and tilting the camera upward. In postprocessing, in Adobe Photoshop CS3, I adjusted Levels, Curved it, and did basic color corrections. I wanted to bring the sky down a bit more because it had that threatening quality that I wanted to bring out, and I just left the buildings as is."

Rock photographer Robert M. Knight has a nose for the blues—that is, for blues-rock guitar virtuosos. Since starting his photo career as a teen in 1968, Knight has befriended and photographed the genre's pantheon—Jimi Hendrix, Jeff Beck, Jimmy Page, Eric Clapton, Albert Collins, Carlos Santana, Stevie Ray Vaughan—having discovered many before they were household names. "It's a horizontal line," he says of the guitar elite, "because each of them has some redeeming

thing that's made them special." His own criteria? "I'd never shoot an artist or a band that I didn't like," he replies.

Knight says his day job as a commercial photographer "has allowed me to enjoy the avocation of shooting all this music." Though much of his rock catalog has become well-known over the years, even more stayed in the vaults. That's about to change. This fall a new book of his work: *Rock Gods, Forty Years of Photography*, will be published by Palace Press's Insight Editions (insighteditions.com). His limited-edition prints will make the gallery circuit (limelightagency.com). And Knight's remarkable rock-and-roll journey is the subject of a new film, *Rock Prophecies*, which will debut at film festivals and other venues this fall (nikonrocker.com).

"All my main guys have come forward to be in the film: Jeff Beck, ZZ Top, Steve Vai, Kenny Wayne Shepherd, Robert Cray—the list goes on of who's in it," Knight says. The film also introduces new talent such as Panic at the Disco, Sick Puppies, and 17-year-old Texan guitar whiz Tyler Dow Bryant. "This kid will be the next guitar hero," Knight predicts.

Knight relies on an easy rapport with musicians to gain trust. "I have a social interaction with most of these artists, and a lot of times I don't take my camera out of the bag," he says. "But when I pull it out, they know I'll do what it takes to make them look good. It's an unspoken agreement."

Knight's gear of choice has always been Nikon. "They're so rugged," he says. "I've dropped them over the years and had various catastrophes happen and picked up the camera and lens and they still work!" Having gone digital with the Nikon D200 and now the D3, he carries an AF Zoom-NIKKOR 80-200mm f/2.8D ED and an AF-S DX NIKKOR 17-55mm f/2.8G IF-ED lens to concerts. "I love shooting live shows," he says, "but offstage candid is where the value is. The collectors' stuff that's going to hold its value is the more intimate, personal, offstage imagery." And if anyone knows how to get that, it's Robert M. Knight.
